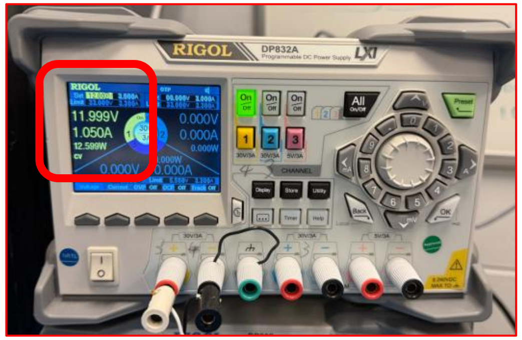
CTS Initial Checkout

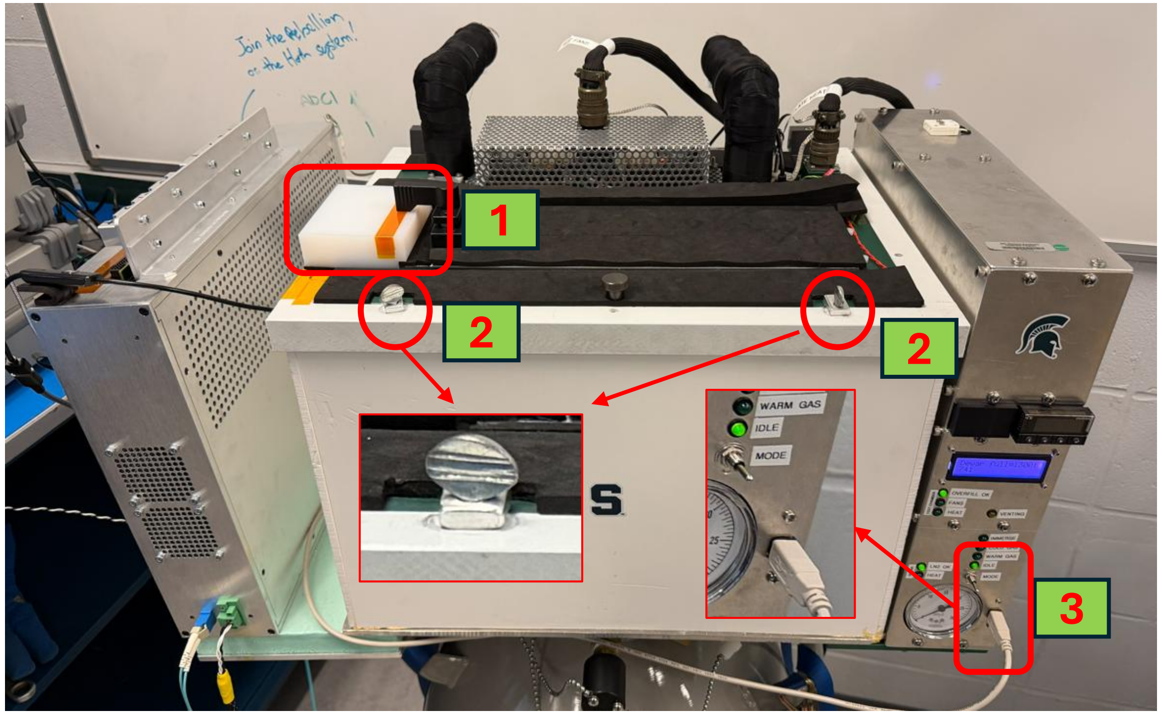
12V for CTS is ON.

Is current between 0.5A and 2A?

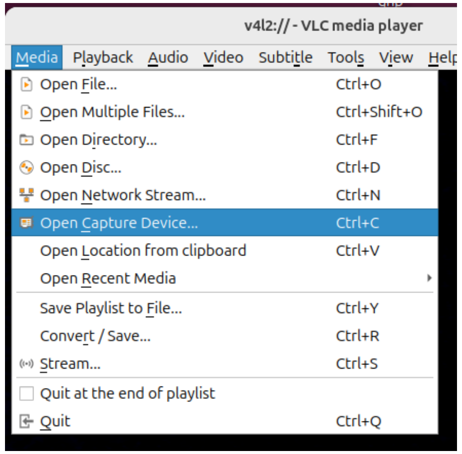


Is CTS chamber top close?

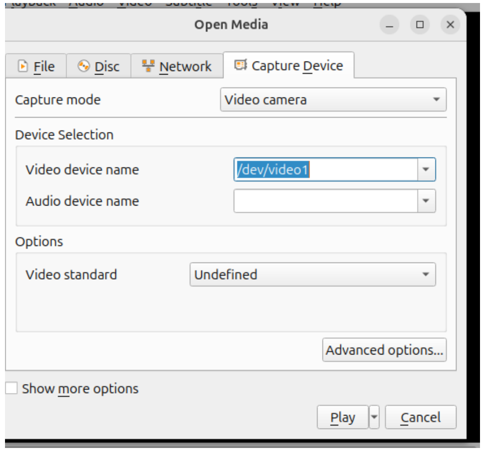
1. Is white block in position?
2. Is top locked?
3. LED ‘IDLE’ ON and USB connected?



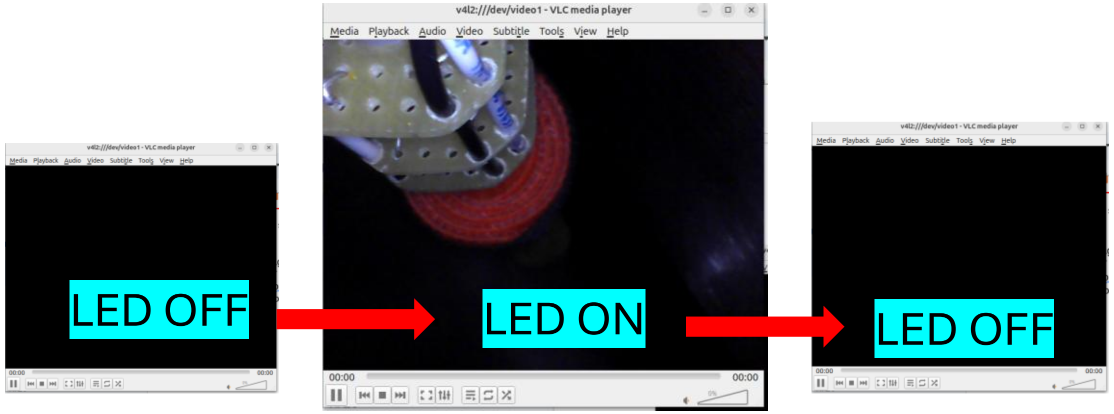
Is camera alive? (VLC player)
Turn on LED, check video and turn it off.



App VLC player
Open Capture Device...

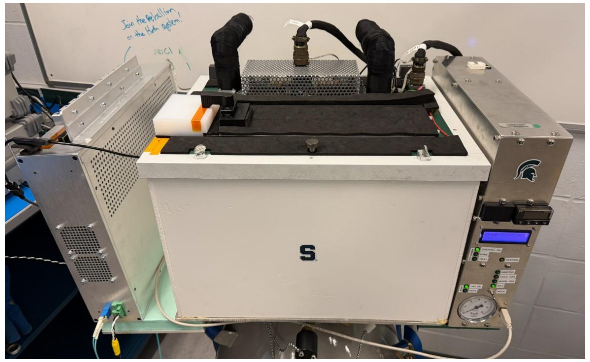


Select video device



LN2 Filling (STOP if you are NOT trained)

Follow these steps to fill the CTS dewar with LN2:

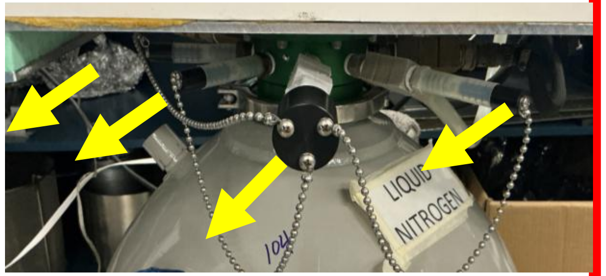


The top MUST be sealed!

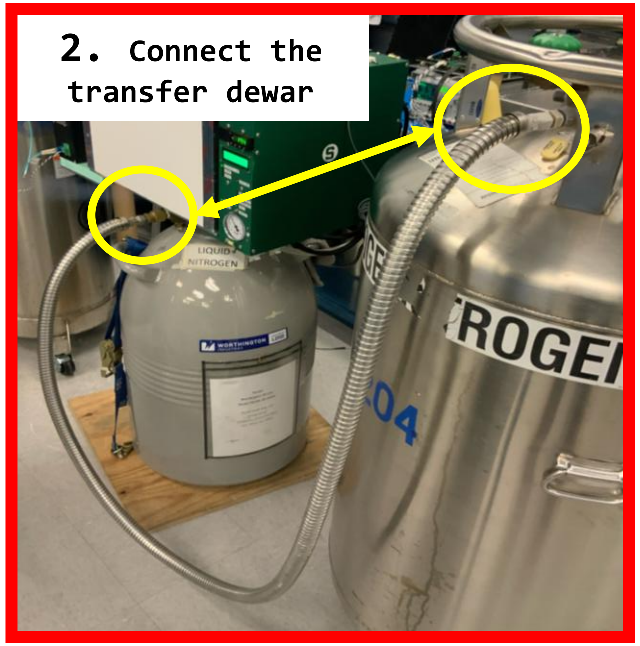
Power On!

1. Remove the LN2 Dewar plugs

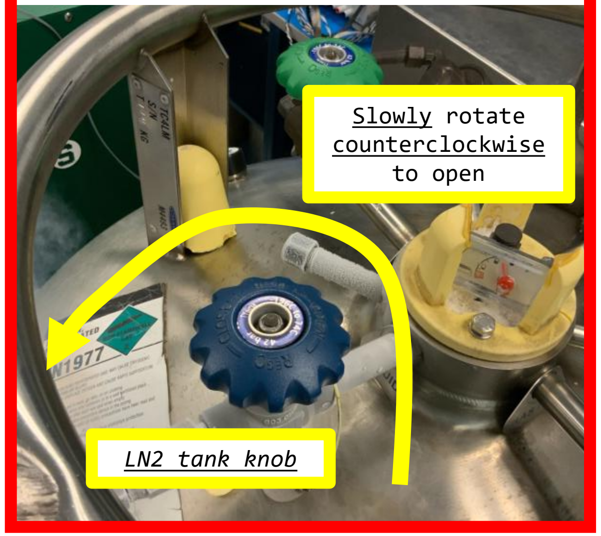
Keep CTS cover close



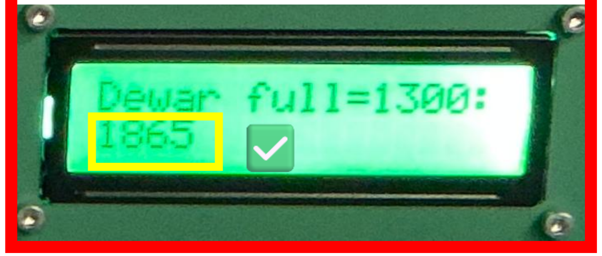
2. Connect the transfer dewar



3. Start the filling process

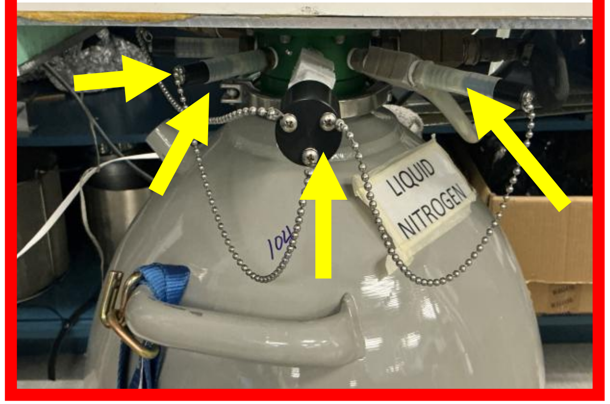


4. Monitor until "Dewar Full" > 1800



5. Stop the filling process (rotate LN2 tank knob clockwise)

5. Remove the transfer line and place LN2 Dewar plugs back.



6. (1)CTS controlled by PC

Confirmed in the terminal. The chamber will be in warm mode for 20 minutes and switch to IDLE mode automatically.

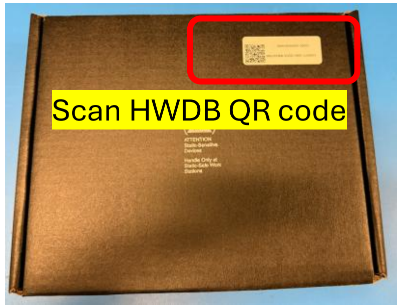
(2) Manual operation

Set chamber in warm mode for 20 minutes and then switch to IDLE mode

Note: you may continue CE box assembly during this warm-up period.

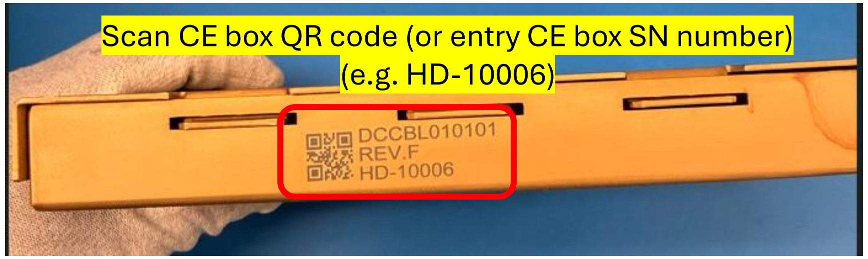
CE Box Visual Inspection

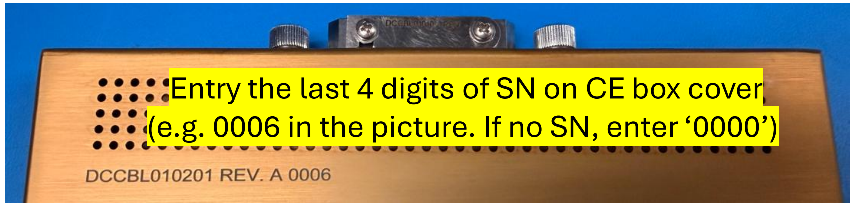
Please contact Tech Coordinator if abnormality is observed!



Is foam box broken?

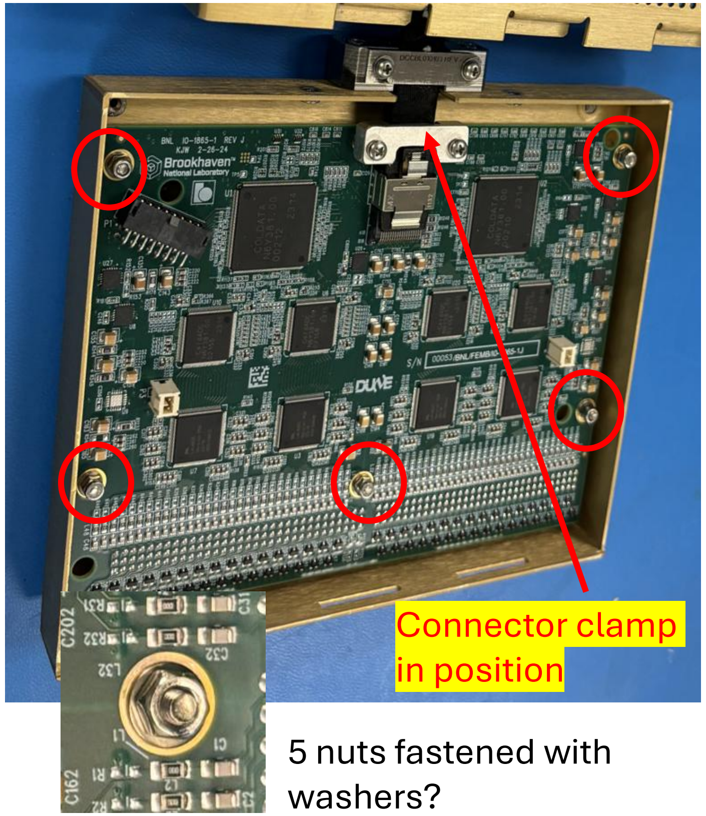
Is CE box enclosed in the ESD bag?





Put the CE box cover and anti-static bag back into the foam box after the SN of cover is recorded!

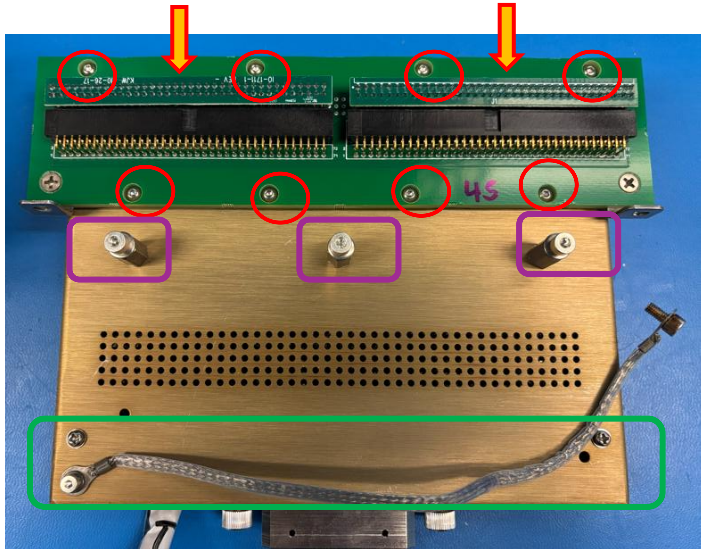
VD CE box (1865)



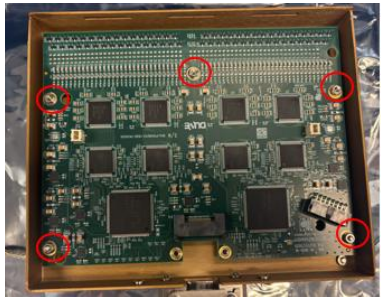
5 nuts fastened with washers?

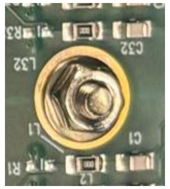
4 screws and 4 washer attached on the cover?

HD CE box (1826)



6 Nuts for CR-RC adapter board?
3 sets of lock nut and washer?
1 Ground strip?
2 FE input terminators?





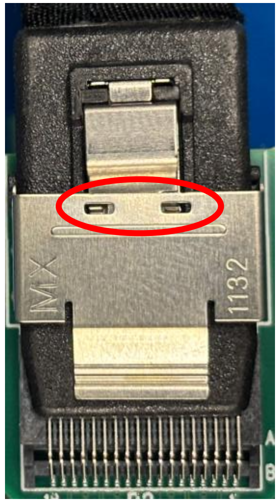
5 nuts fastened with washers?

Bottom CE Box (VD) Assembly

Follow these steps to assemble the Bottom CE Box in the support structure:

Make sure you are wearing ESD-safe gloves and a ESD monitor!

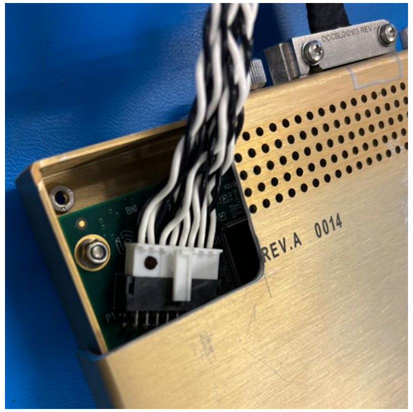
1. Install miniSAS Cable + Clamp



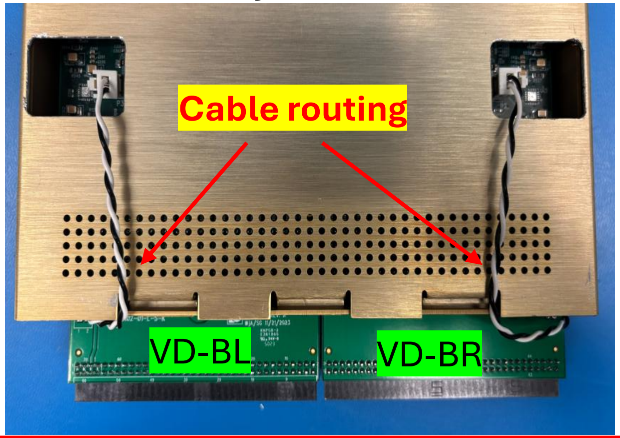
Locks in position

2. Install Test Cover

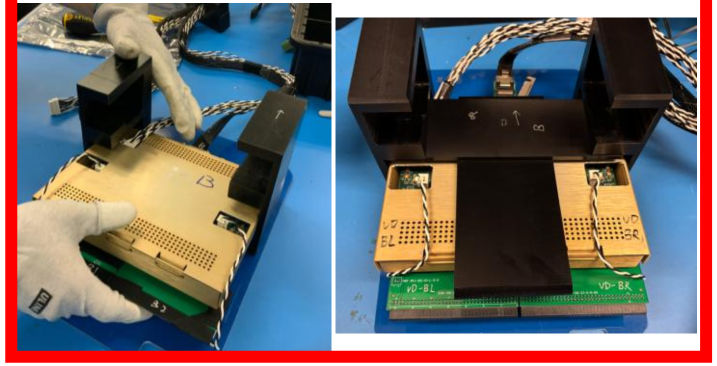
3. Install power cable



4. Install Toy TPCs



5. Insert into Bottom Slot

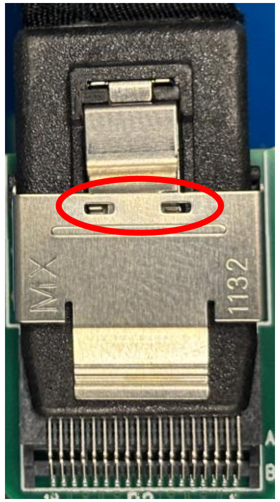


Top CE Box (VD) Assembly

Follow these steps to assemble the Top CE Box in the support structure:

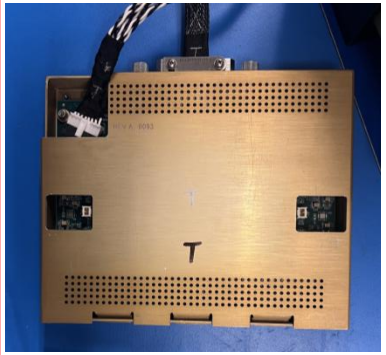
Make sure you are wearing ESD-safe gloves and a ESD monitor!

1. Install miniSAS Cable + Clamp

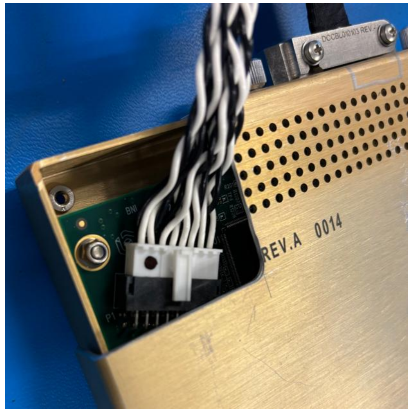


Locks in position

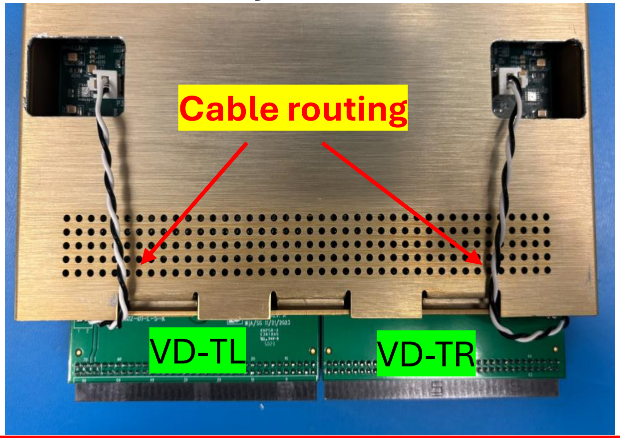
2. Install Test Cover



3. Install power cable



4. Install Toy TPCs



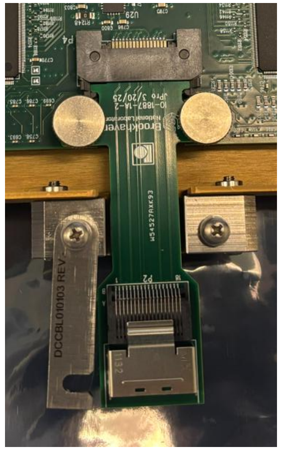
5. Insert into top Slot

Bottom CE Box (HD) Assembly

Follow these steps to assemble the Bottom CE Box in the support structure:

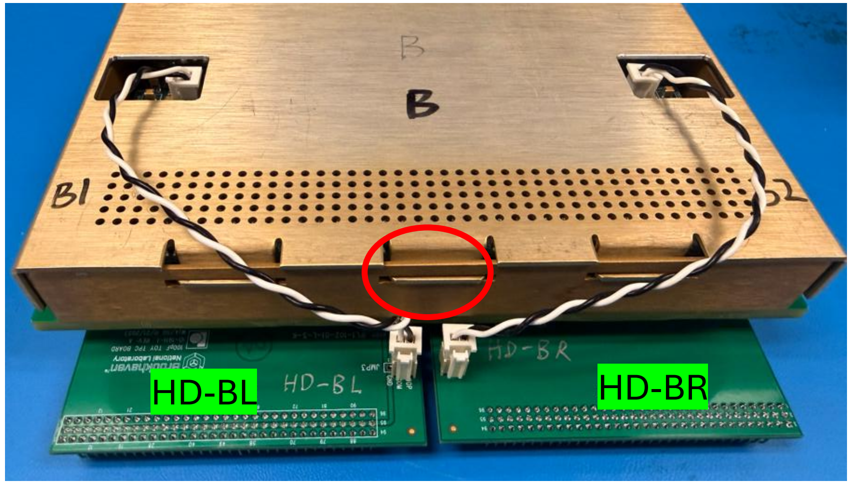
Make sure you are wearing ESD-safe gloves and a ESD monitor!

1. Install Adapter and test cover

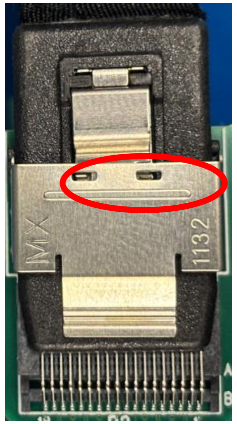


Change later

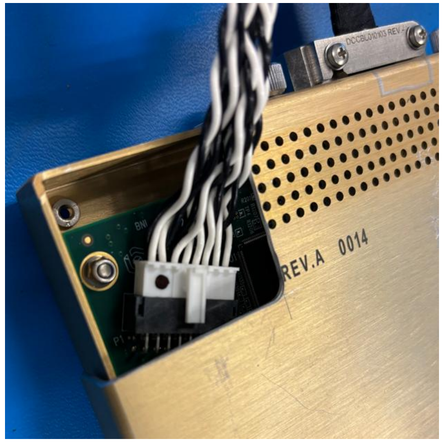
2. Remove FE terminators, install Toy TPCs



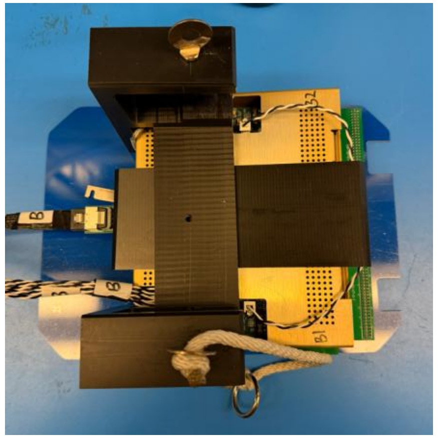
3. Install cables



Locks in position



4. Insert into Bottom Slot and fasten CE box

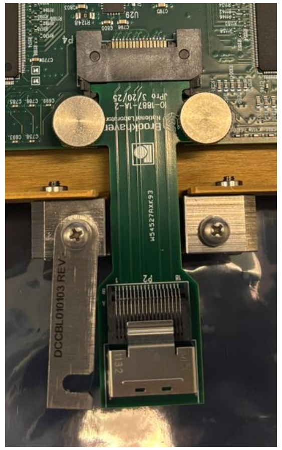


Top CE Box (HD) Assembly

Follow these steps to assemble the Bottom CE Box in the support structure:

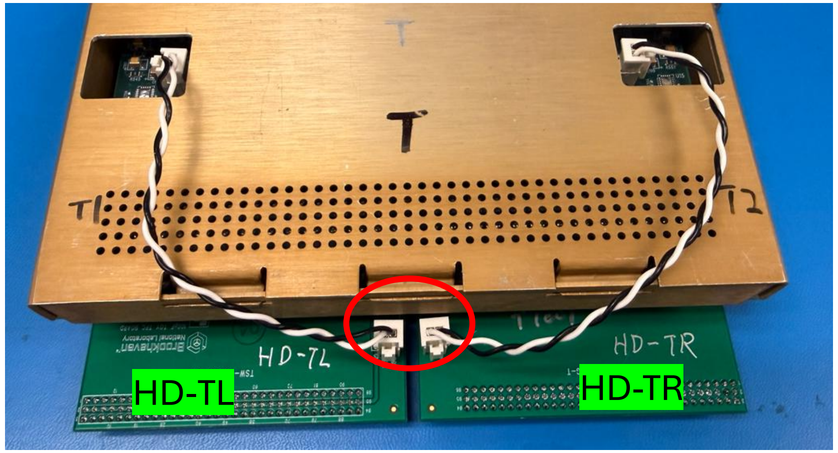
Make sure you are wearing ESD-safe gloves and a ESD monitor!

1. Install Adapter and test cover

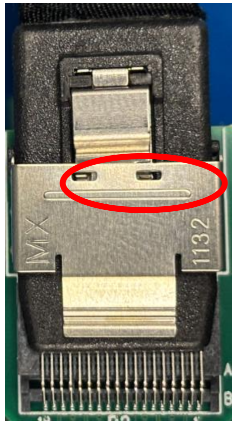


Change later

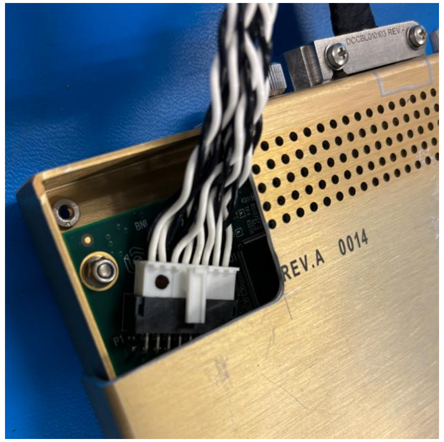
2. Remove FE terminators, install Toy TPCs



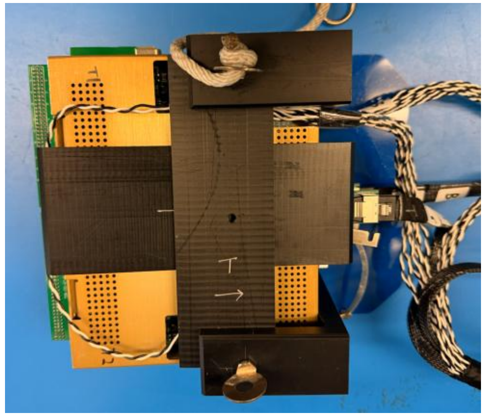
3. Install cables

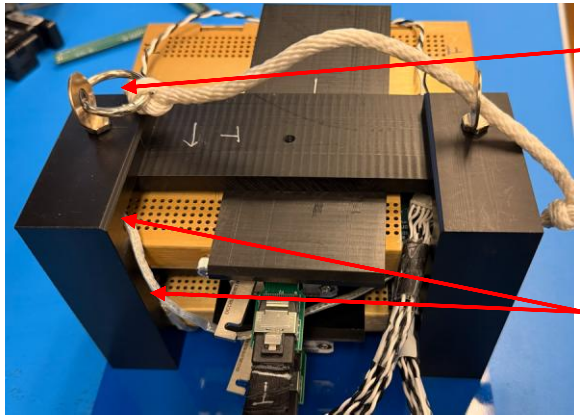


Locks in position



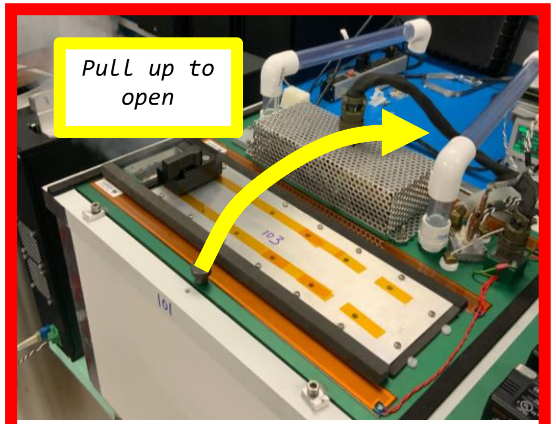
4. Insert into top Slot and fasten CE box





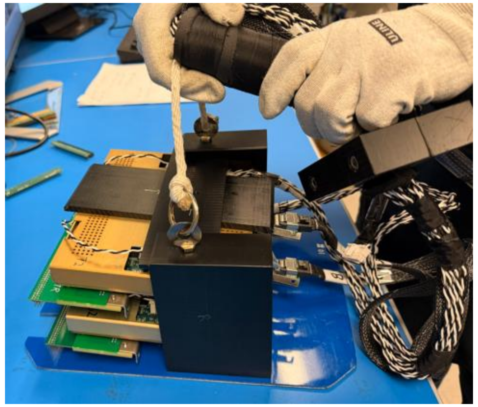
Place CE Boxes into CTS Chamber

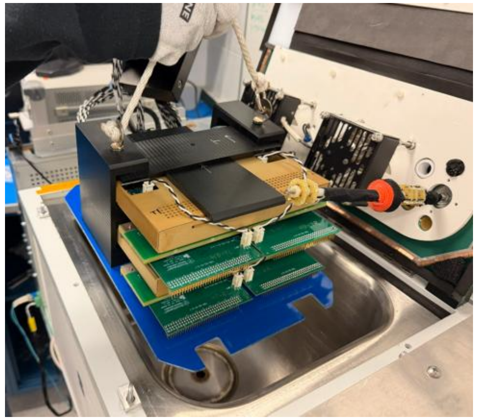
Follow these steps to install the FEMBs in the CTS:

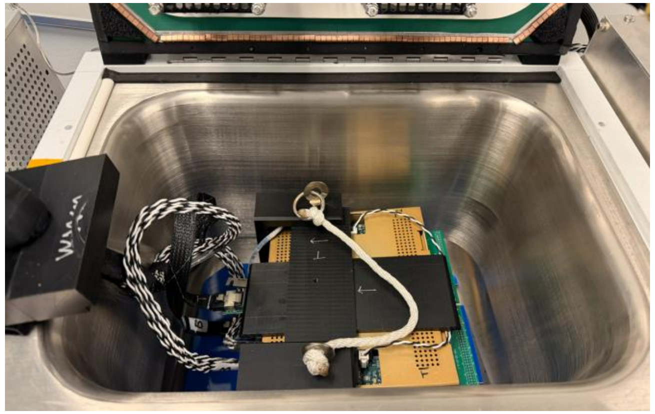


1. Open the CTS cover

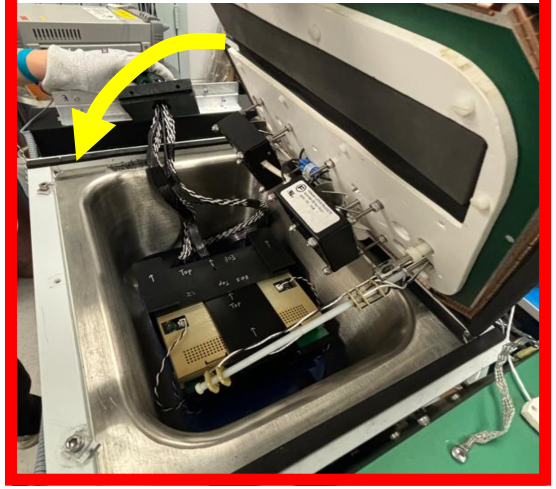
2. Place CE boxes inside the CTS chamber



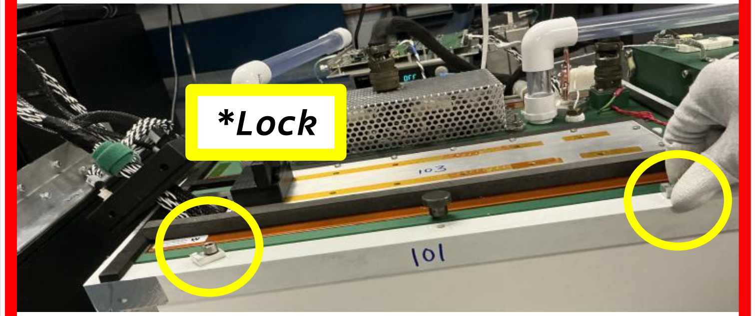




3. Carefully close the CTS cover



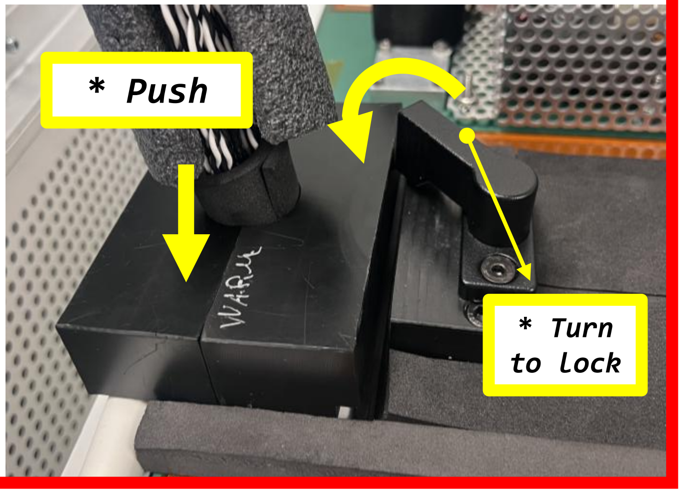
4. Lock the CTS chamber



unlocked

Locked & tighten

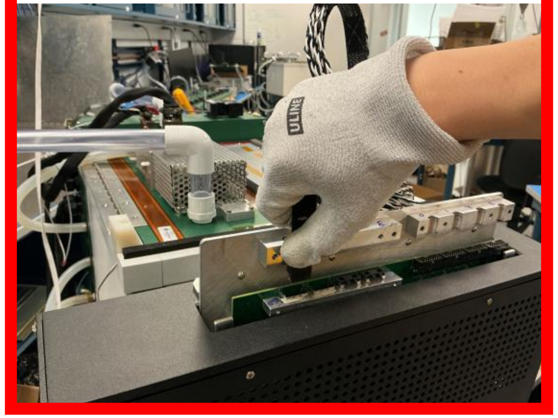
5. secure the block



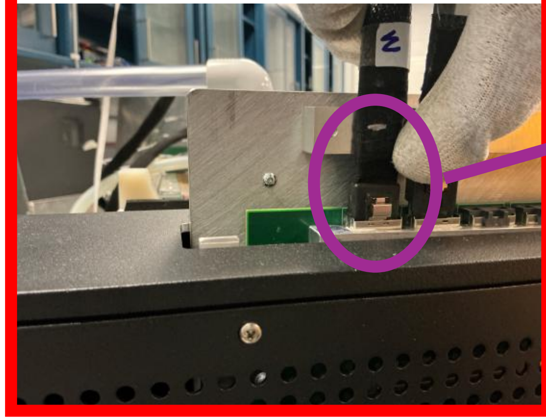
Cable Connection at WIB side

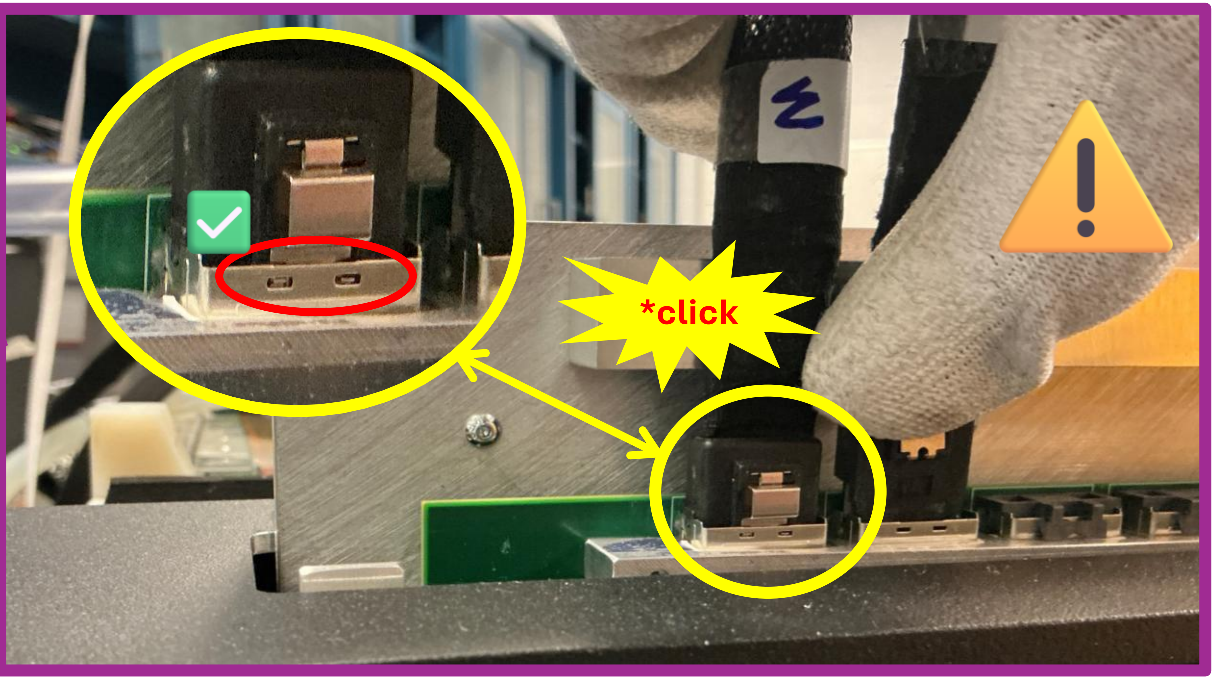
Follow these steps to connect the FEMBs to the WIB

1. Place the Bottom Data Cable (B) in Slot B

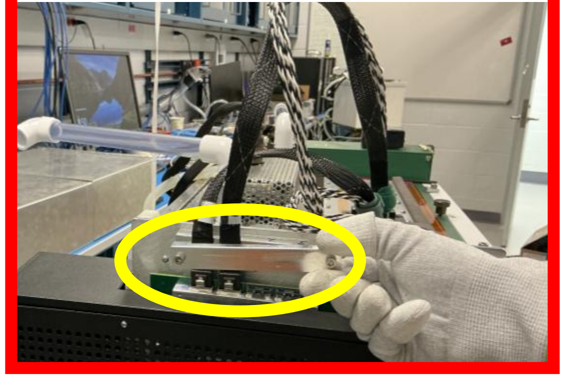


2. Place the Top Data Cable (T) in Slot *T*

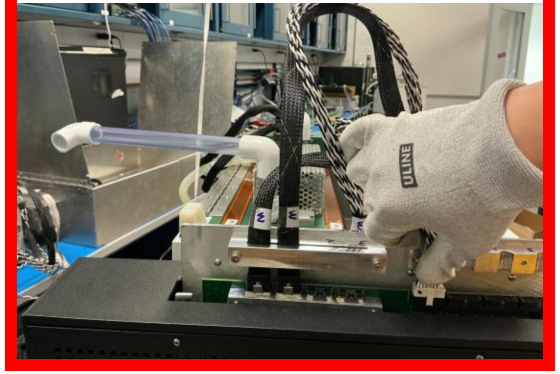




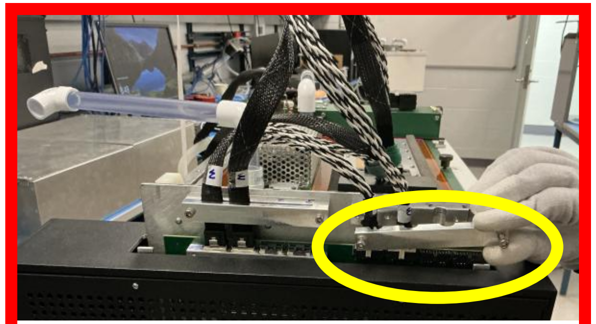
3. Install the Strain Relief Clamp



4. Install the Bottom Power Cable in Slot *B*

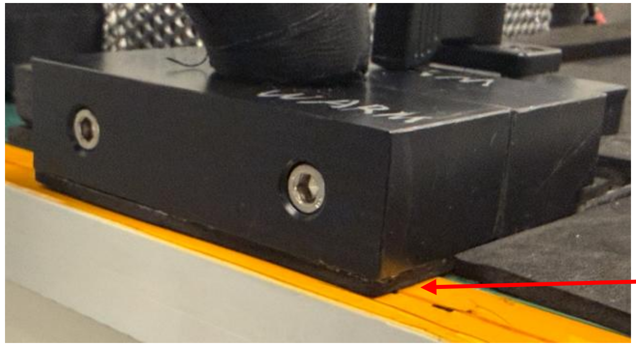


5. Install the Top Power Cable in Slot *T*



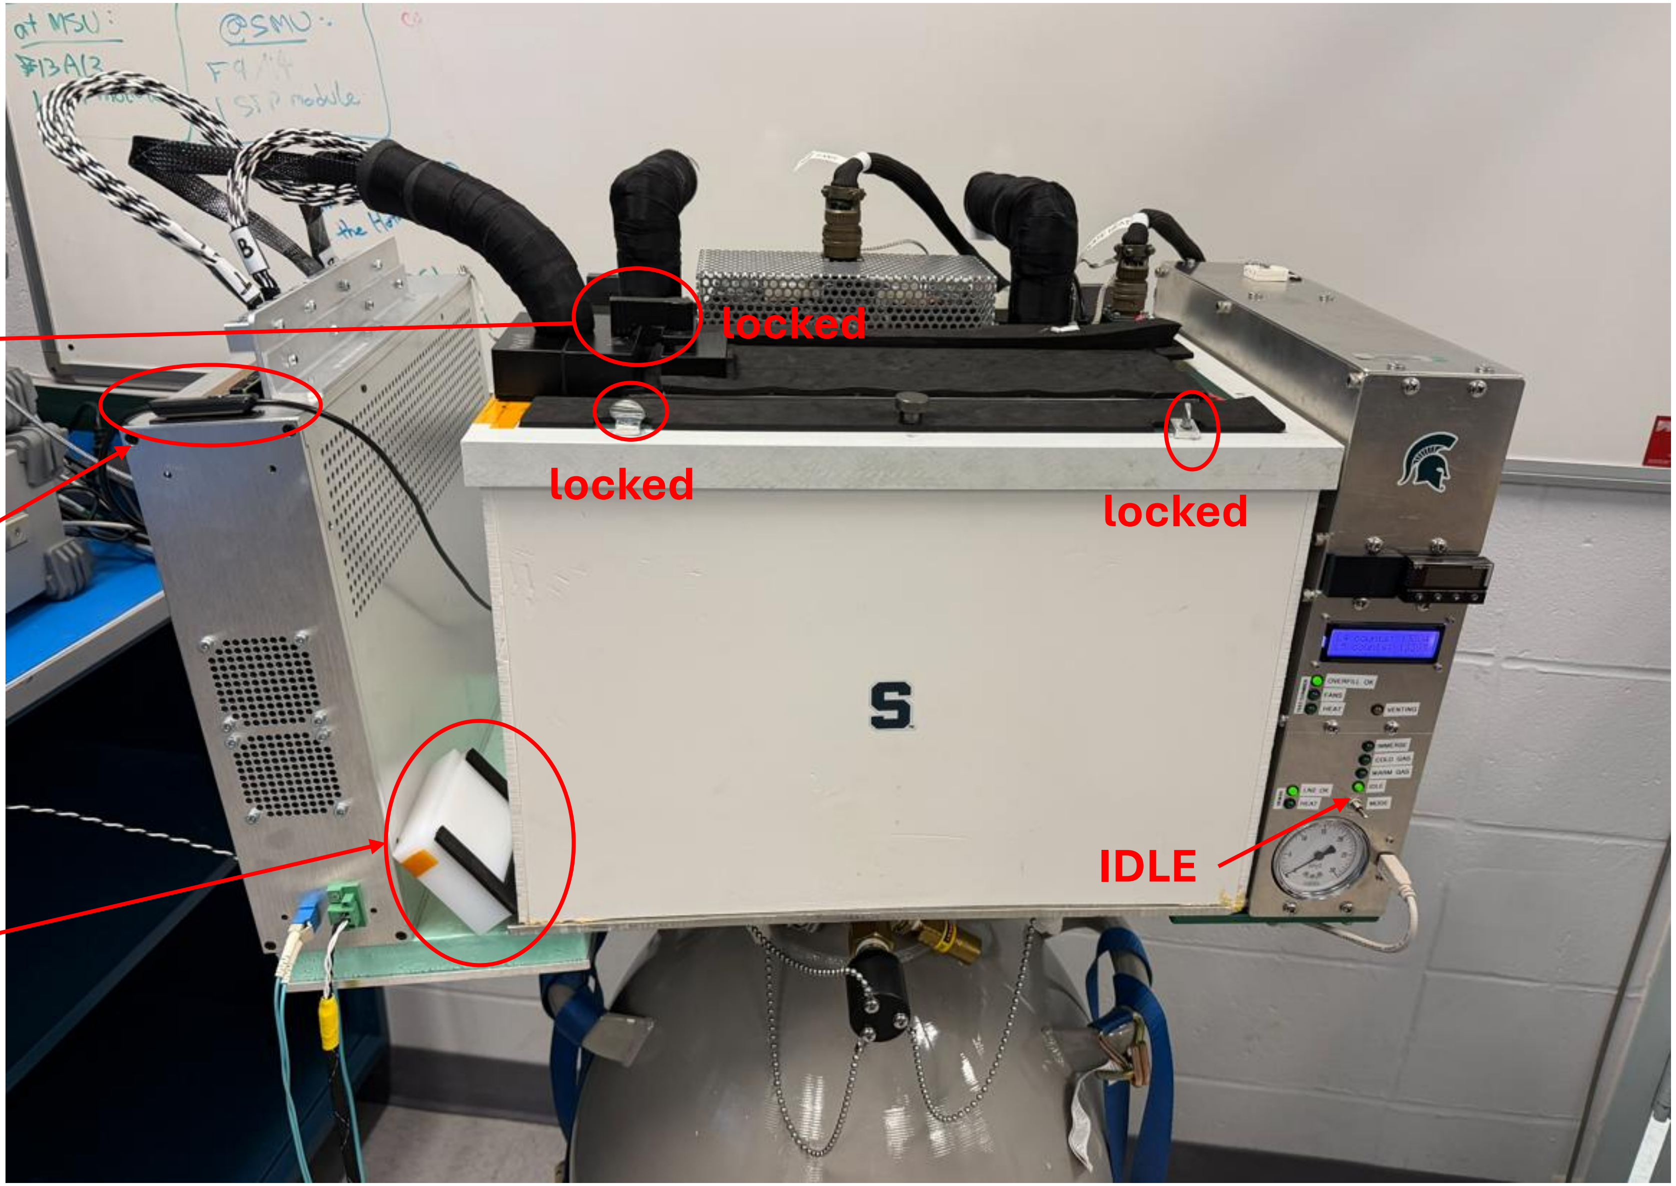
6. Install the Strain Relief Clamp (optional)

Make sure CTS is closed, locked and ready to use



No visible air gap!

Camera LED switcher

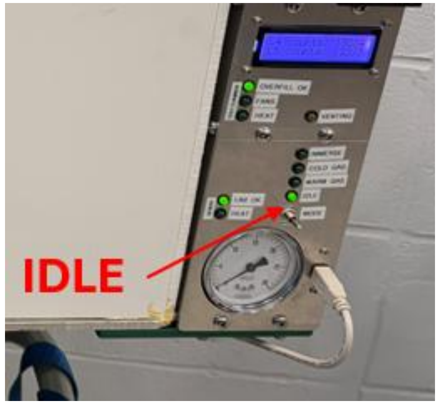


When the cold cable bundle is removed, this block should seal the cover all the time!

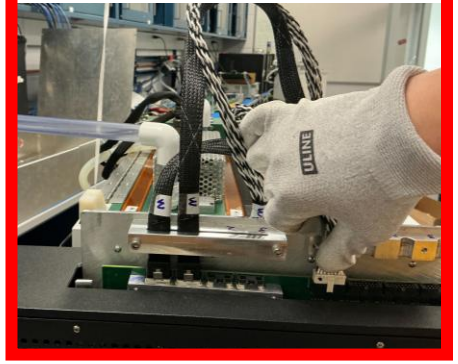
Take CE boxes out of the Chamber

Remember to wear ESD-safe gloves and a ESD monitor!

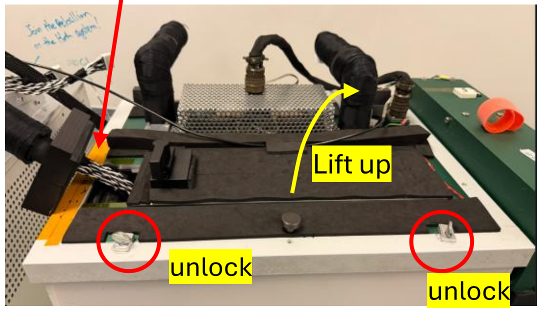
1. CTS in IDLE mode



2. Disconnect the Data and Power cables from the WIB

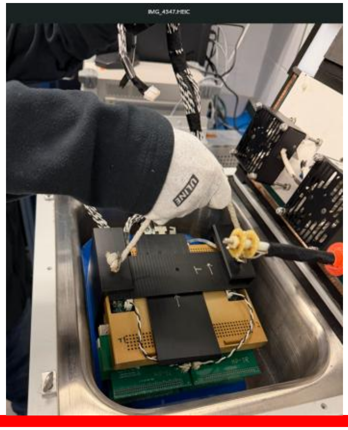


Unlock the cable bundle

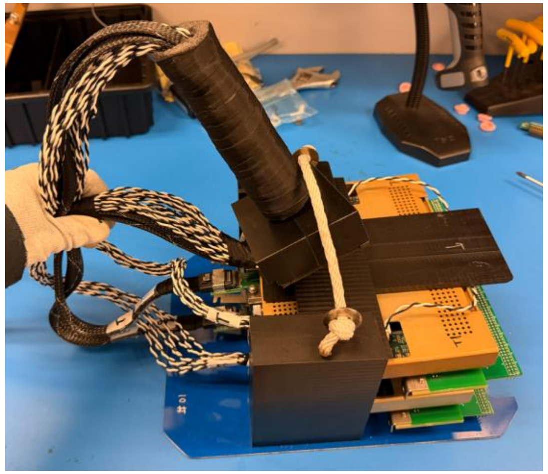


3. Open the CTS cover

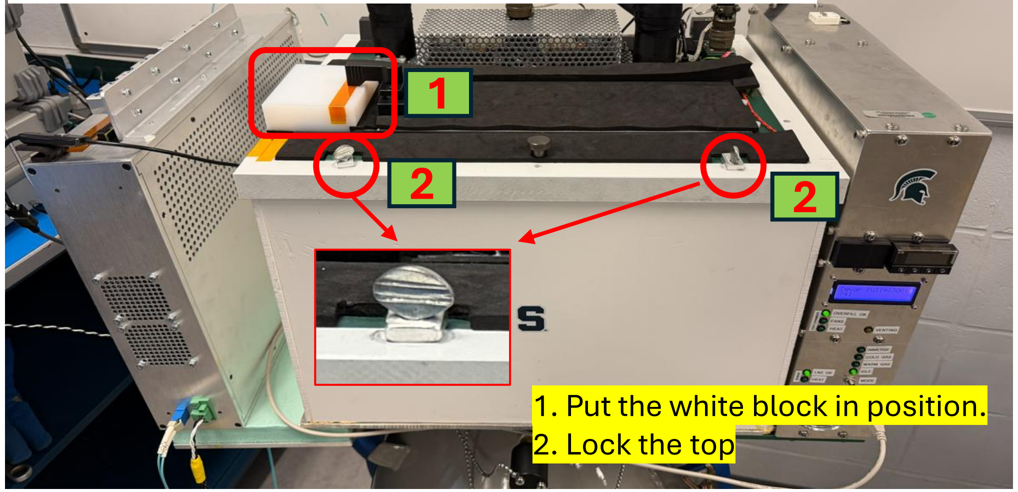
4. Hold the cable bundle, carefully lift up the CE boxes



5. Place it on the assembly area

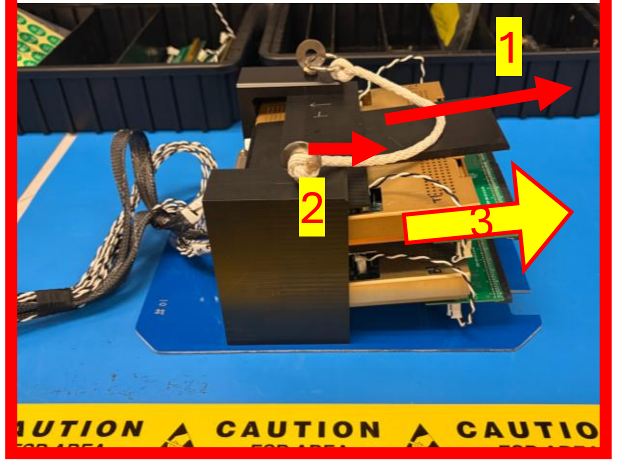


6. Close CTS chamber top

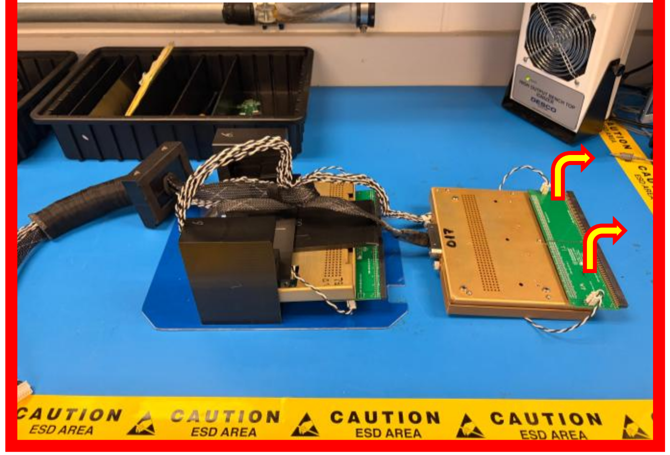


Disassembly 01: Top CE box (VD)

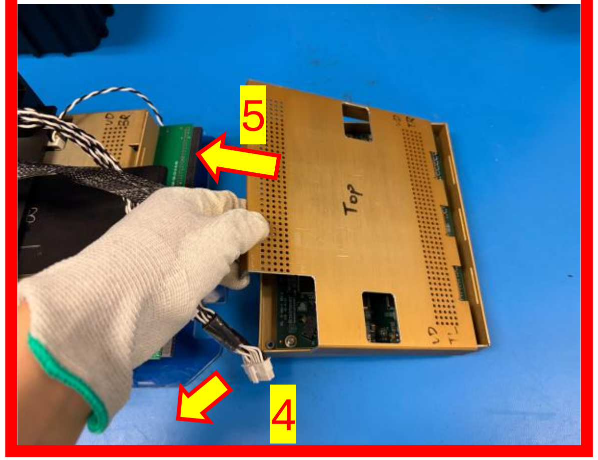
1. Wear ESD component
2. Remove the CE Box from the support structure



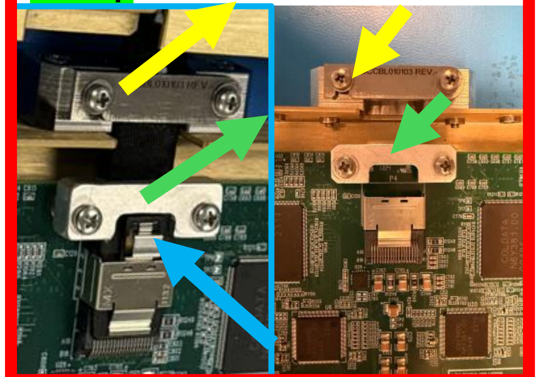
3. Remove The Toy_TPC



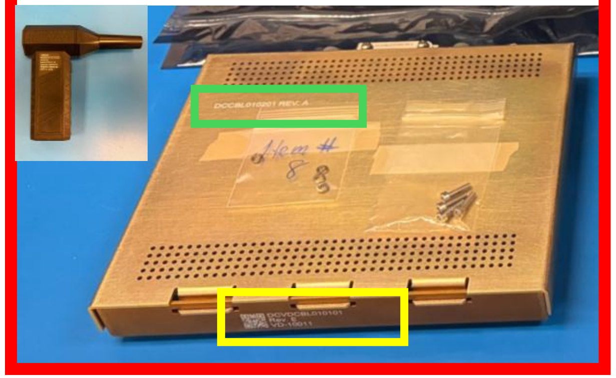
4. Remove Power Cable
5. Remove The Test Cover



6. Remove The miniSAS Cable
7. Secure connector clamp and cable relief clamp



8. Scan CE box ID and original CE Box Cover ID



9. Install original cover, also check result at bottom

10. Scan Foam Box ID and package the CE Box

"PASS" or "NG"

Disassembly 02: Bottom CE box (VD)

1. Wear ESD component

3. Install Power Cable

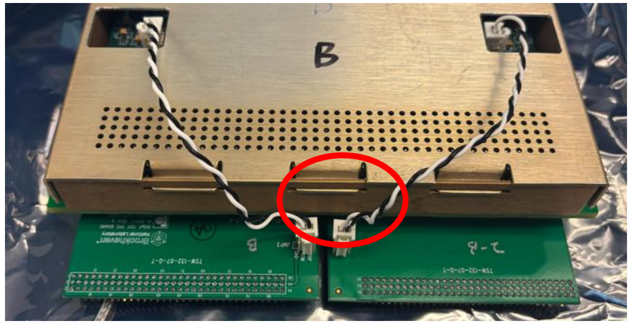
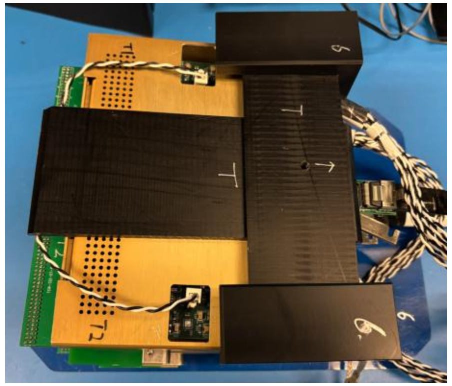
3. Remove FE terminators and install Toy TPCs



4. Insert into top Slot and fasten CE box (secure ground strips)

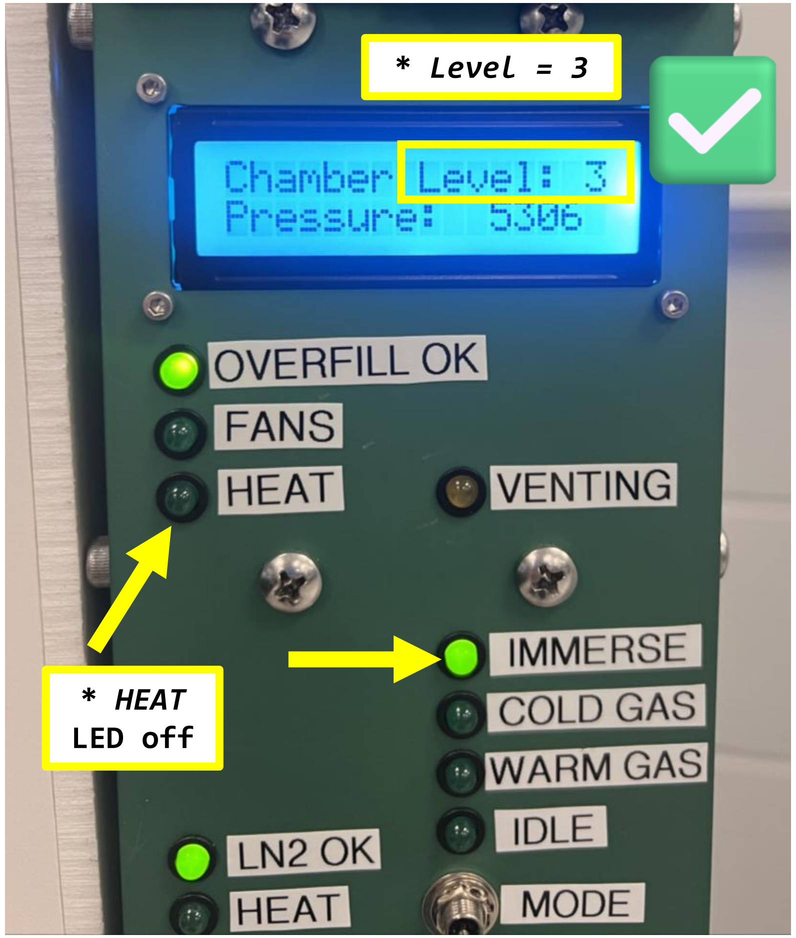


Make sure CTS is closed, locked and ready to use

Preparation for Cold QC: CTS Cooldown

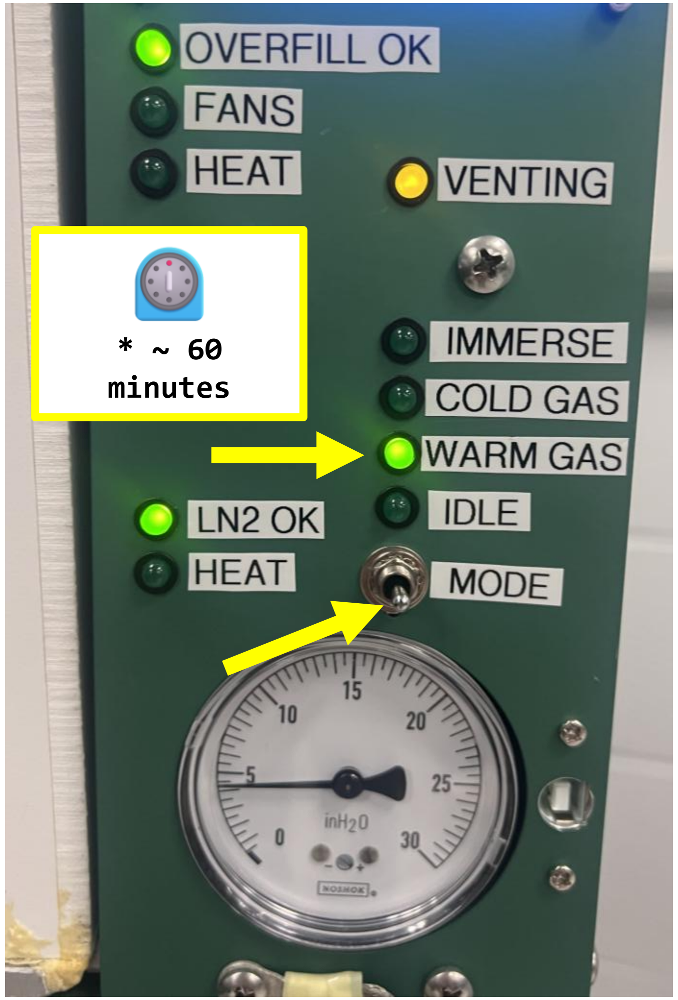
1. Switch to *COLD GAS* for 5 minutes

2. Switch to *IMMERSE* and wait for *Level 3* + Heat LED Off



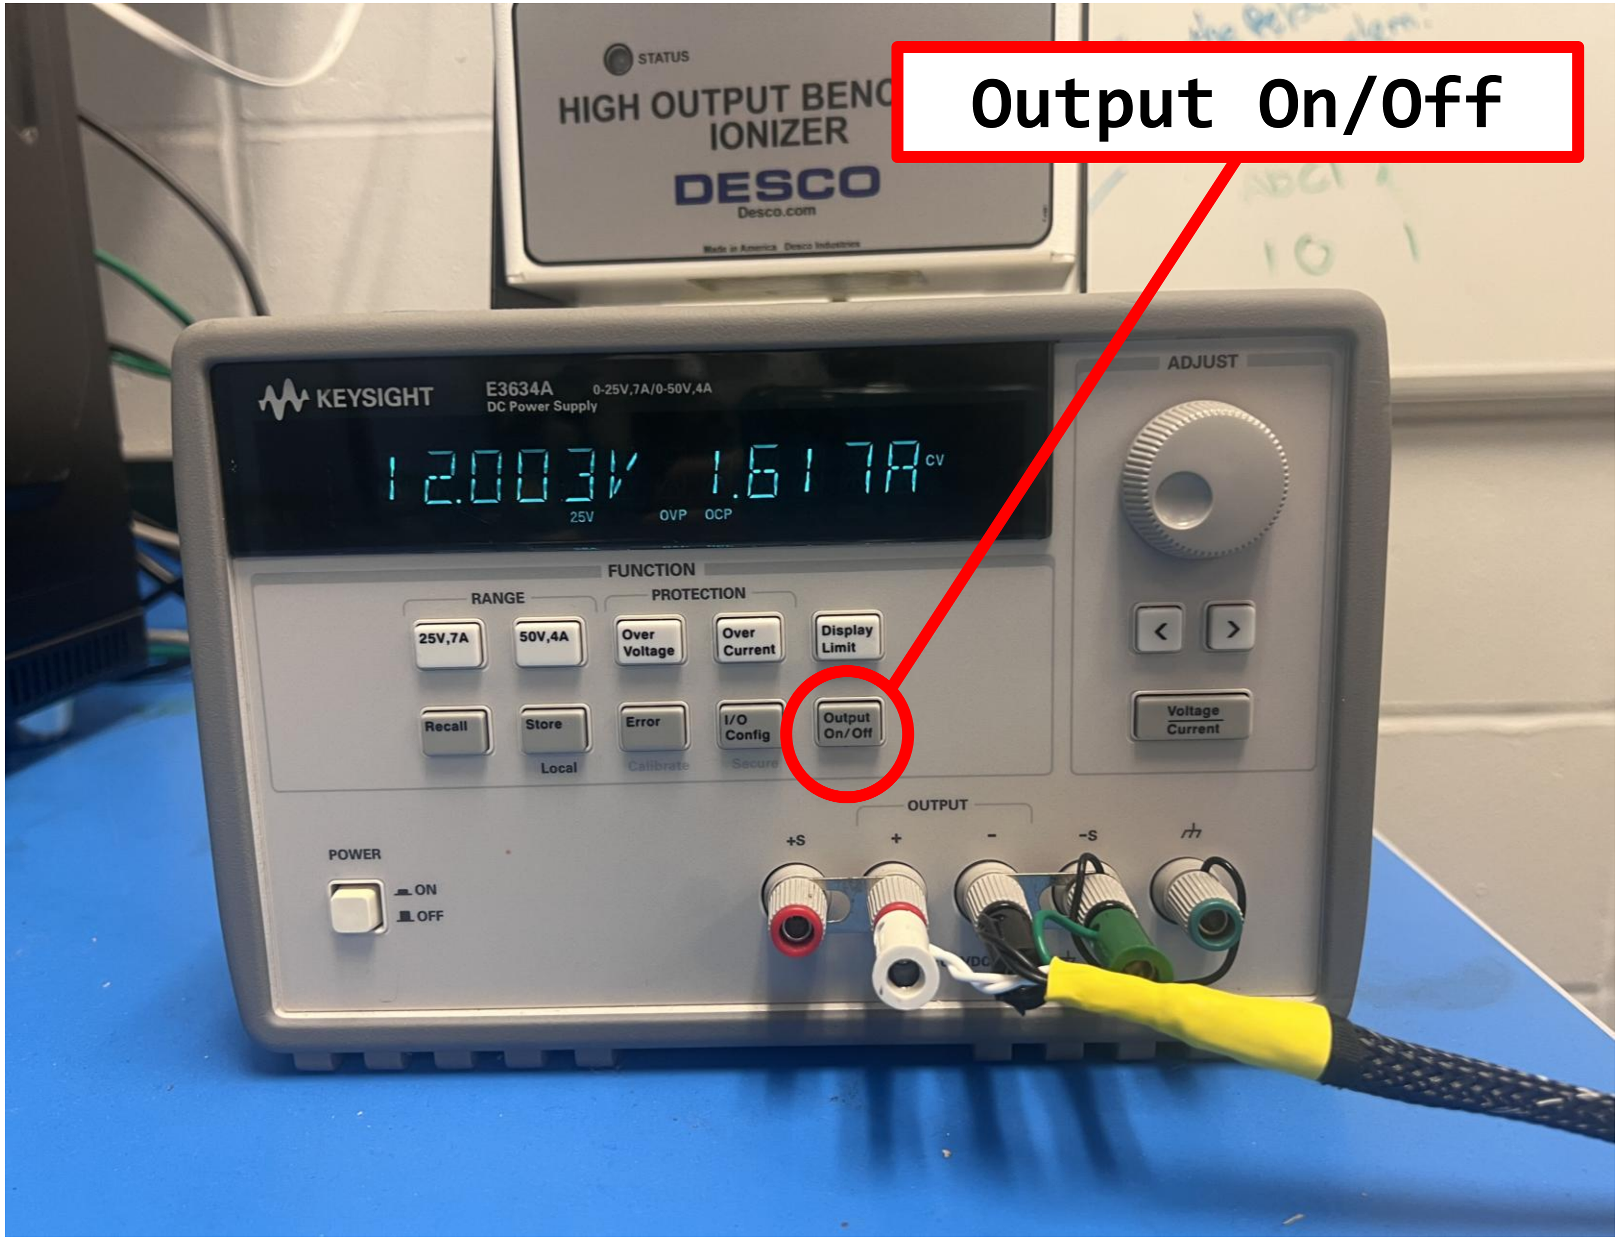
Post-Cold QC: Switch CTS to *WARM*

Switch to *WARM GAS* and wait 60 minutes

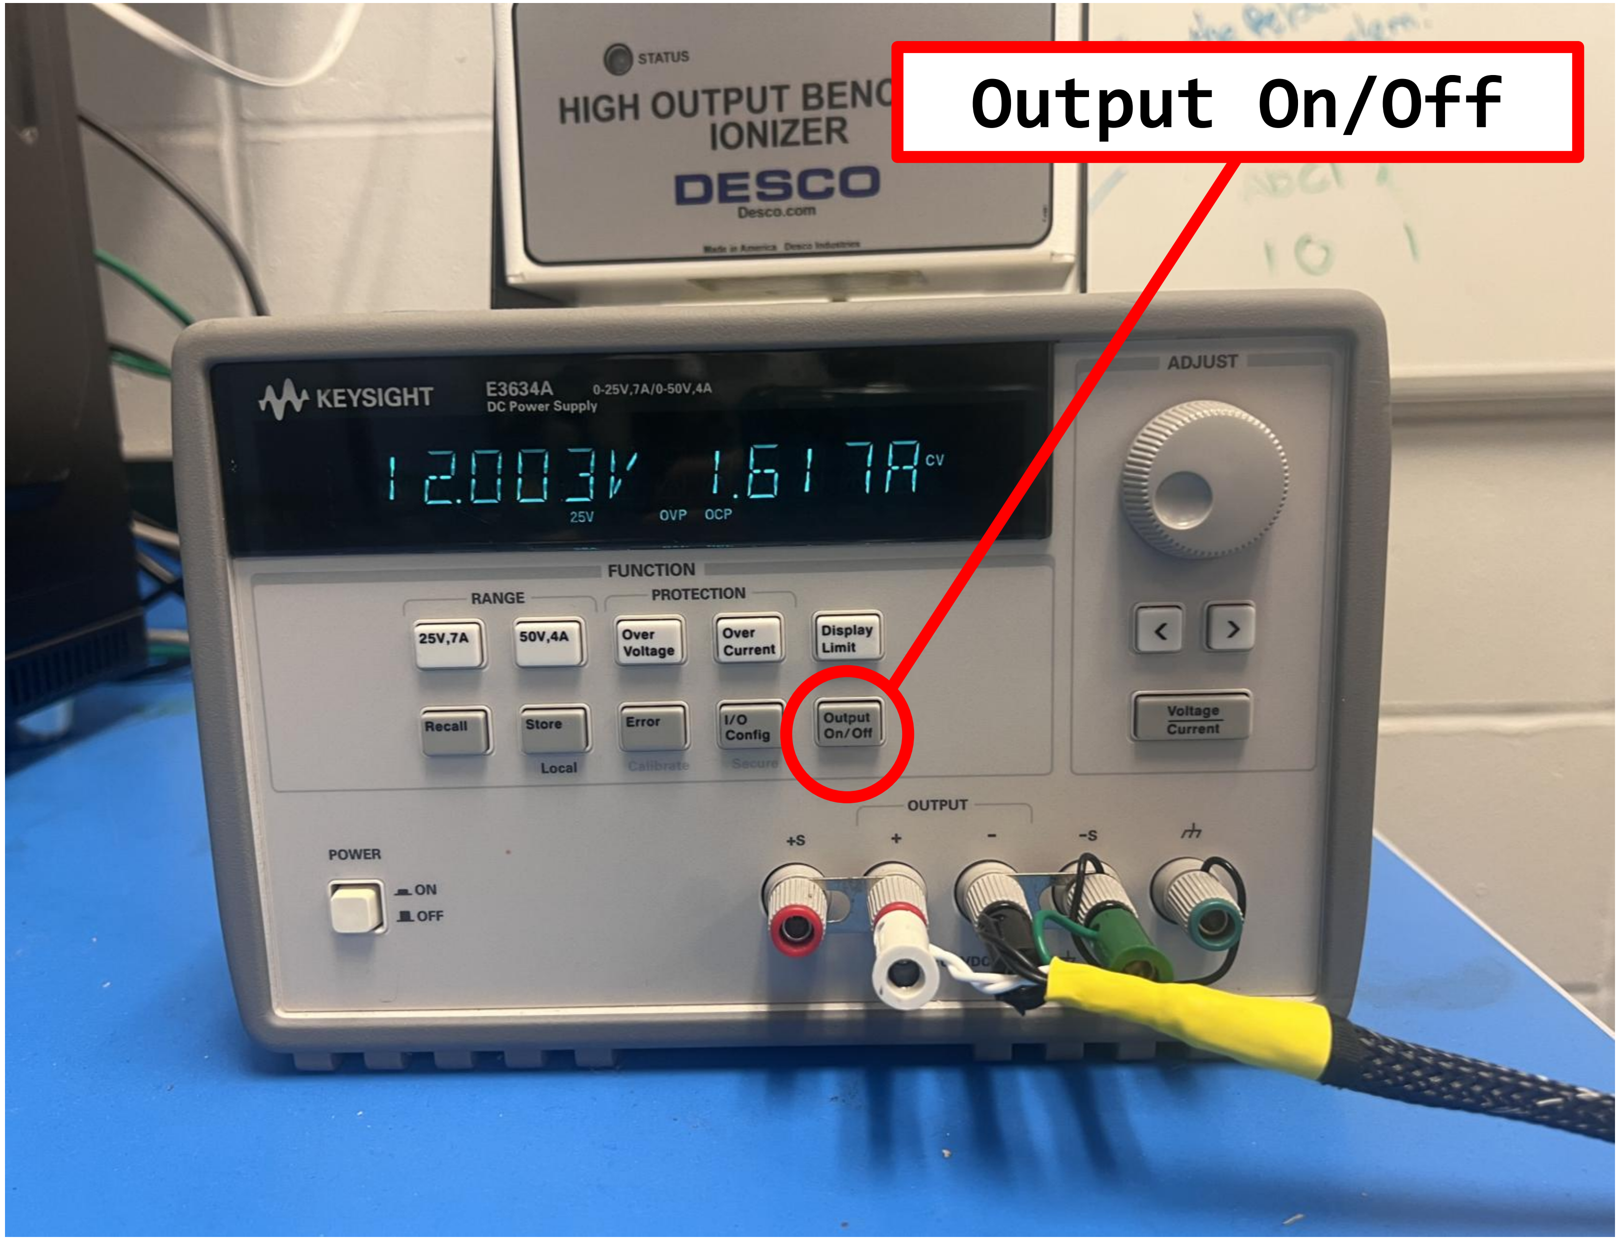


Lingyun: Rigol power supply will be in use, so that computer can control 12V ON/OFF for WIB.
The pop-windows related to power supply should be removed.

Warm QC: Power On WIB



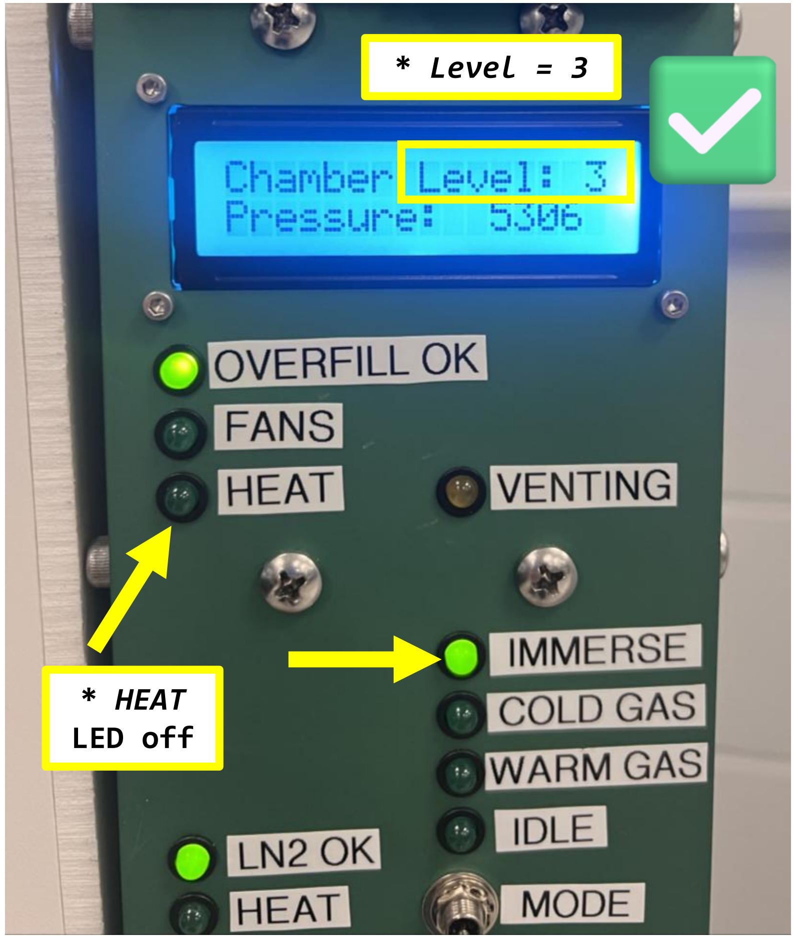
Warm QC is Done! Power Off WIB



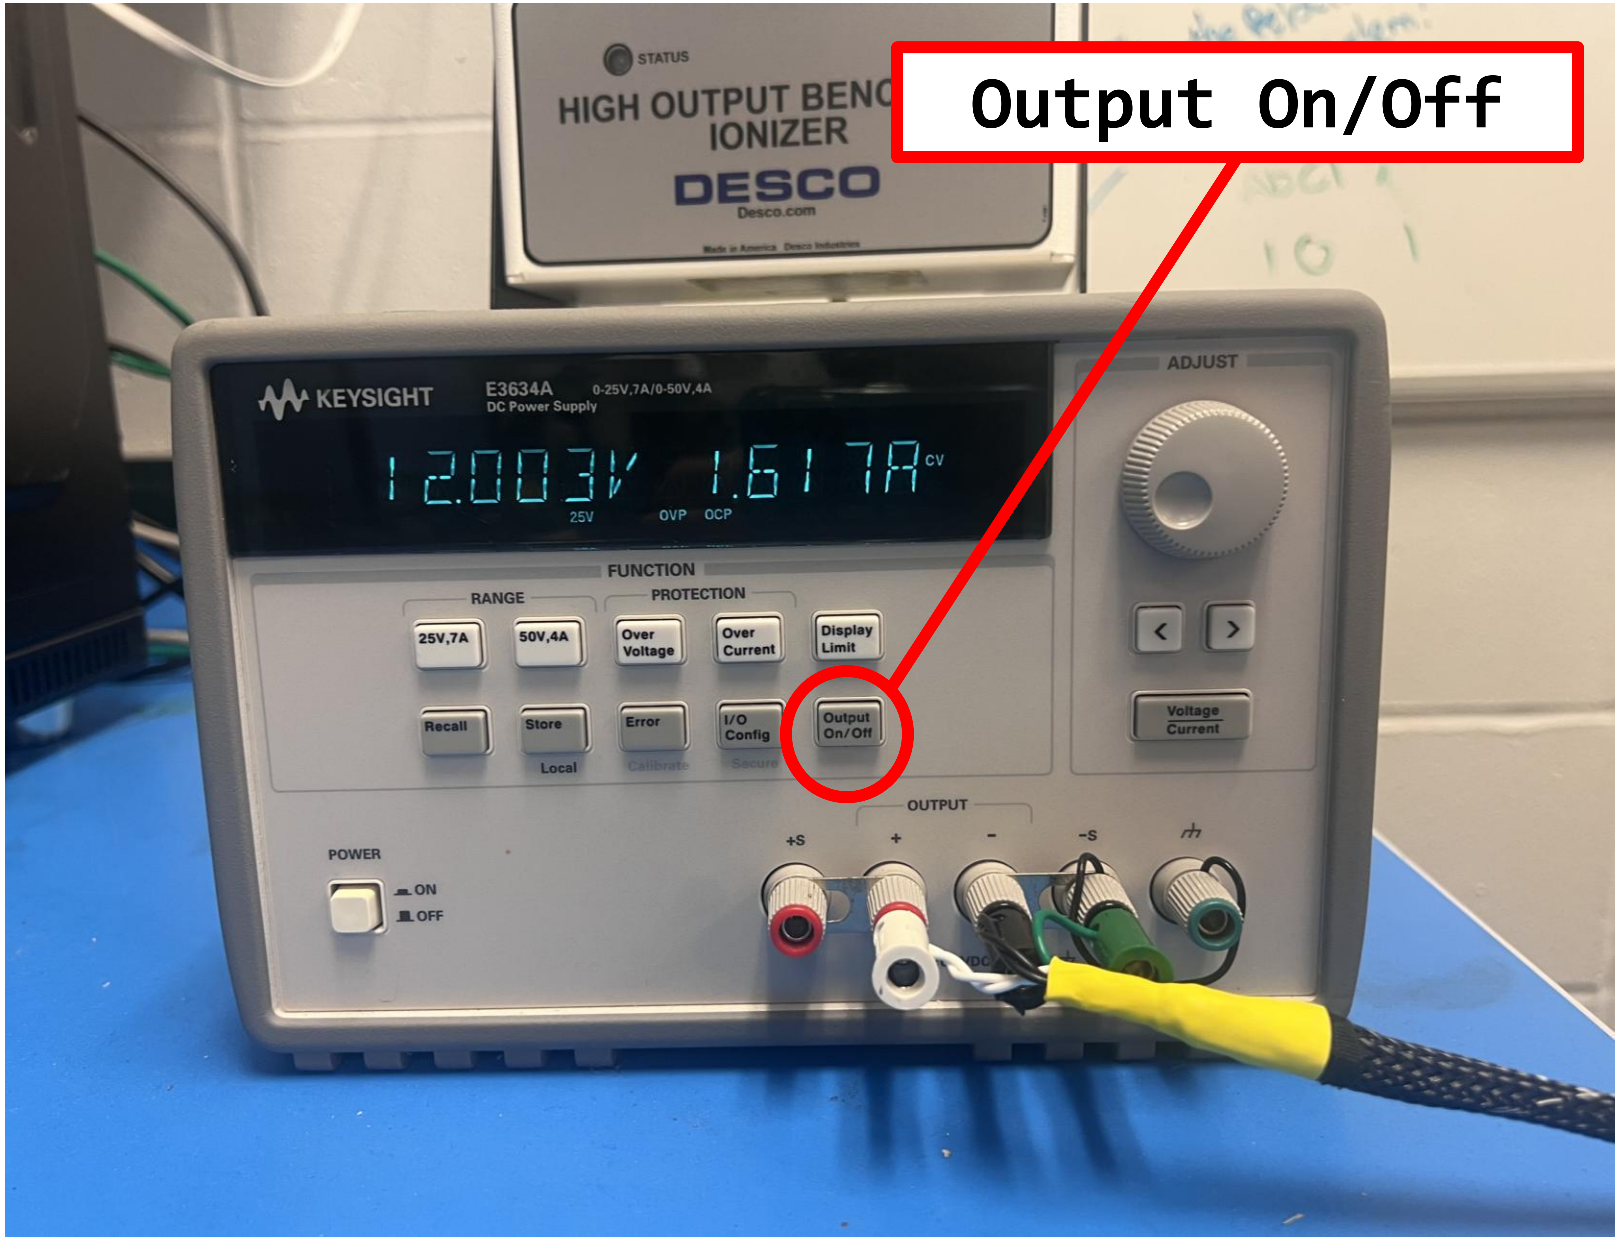
Preparation for Cold QC: CTS Cooldown

1. Switch to *COLD GAS* for 5 minutes

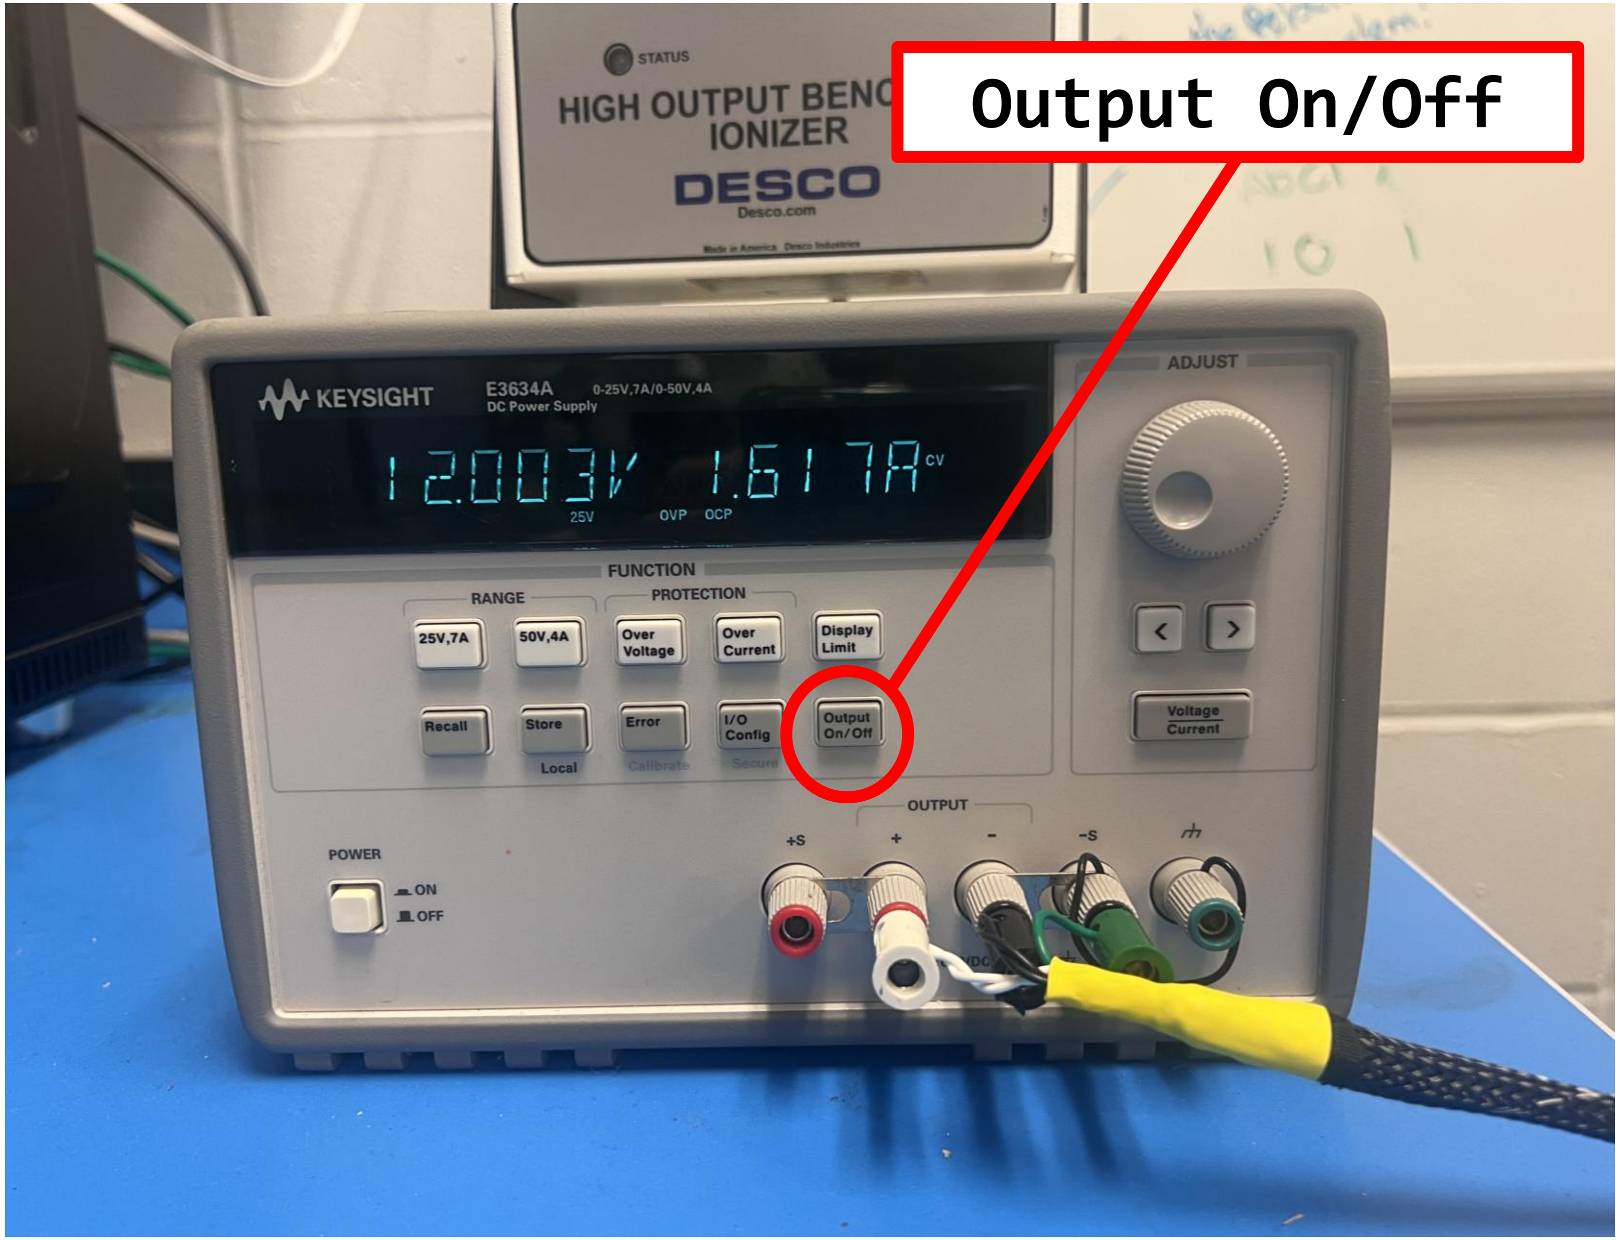
2. Switch to *IMMERSE* and wait for *Level 3* + Heat LED Off



Cold QC: Power On WIB

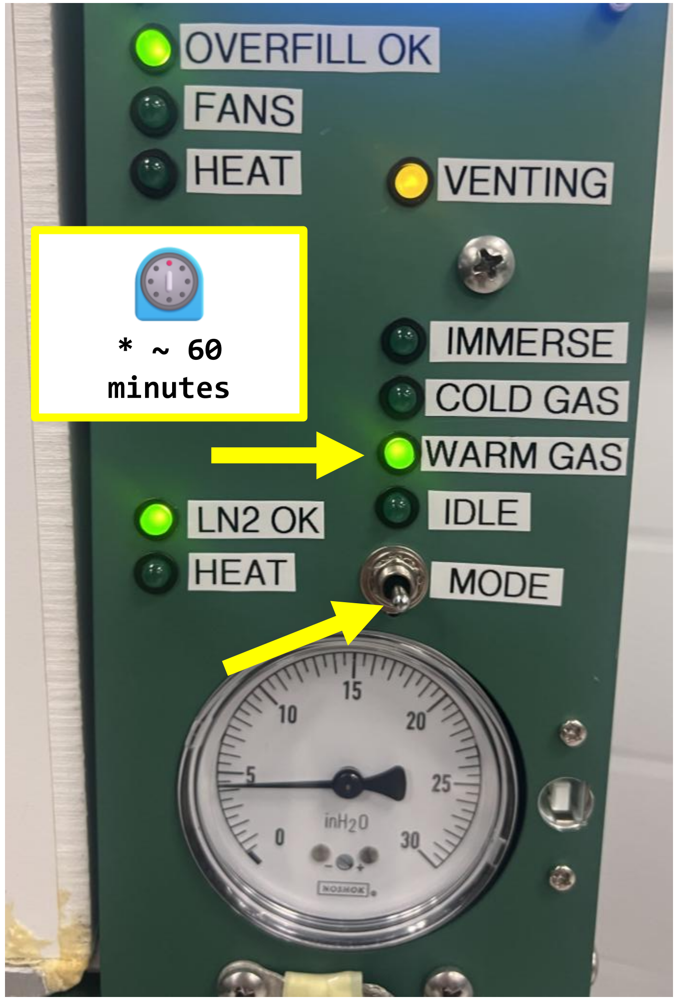


Cold QC is Done! Power Off WIB



Post-Cold QC: Switch CTS to *WARM*

Switch to *WARM GAS* and wait 60 minutes ~~or until the temperature reaches 45°C~~

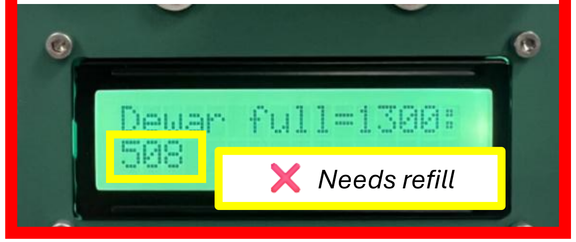


LN2 Filling (STOP if you are NOT trained)

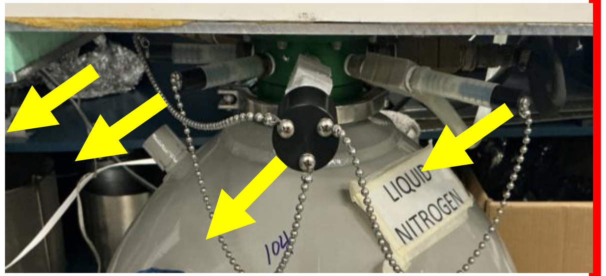
Follow these steps to fill the CTS dewar with LN2:

1. Turn On CTS Controller and set in IDLE

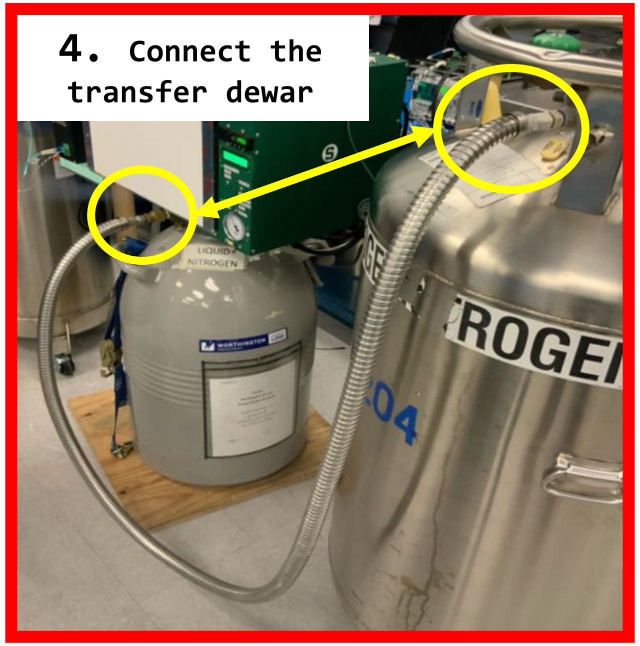
2. If value for "Dewar Full" is less than 1800, refill. Follow steps 3-10



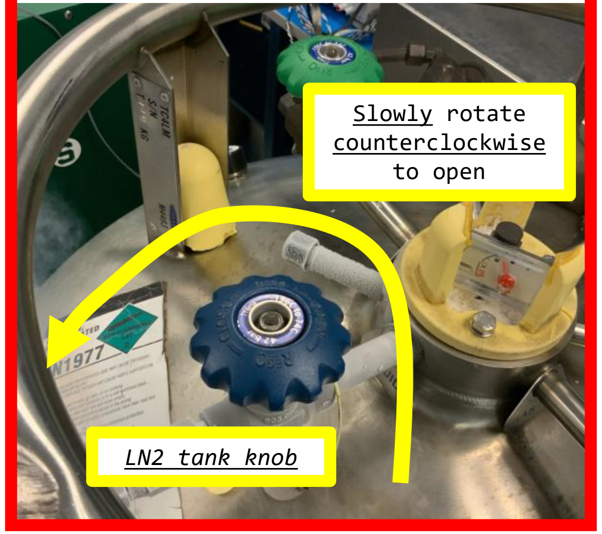
3. Remove the LN2 Dewar plugs
Keep CTS cover close



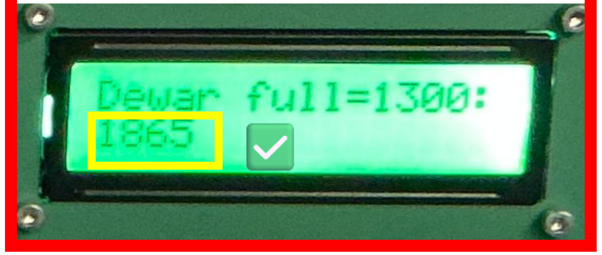
4. Connect the transfer dewar



5. Start the filling process

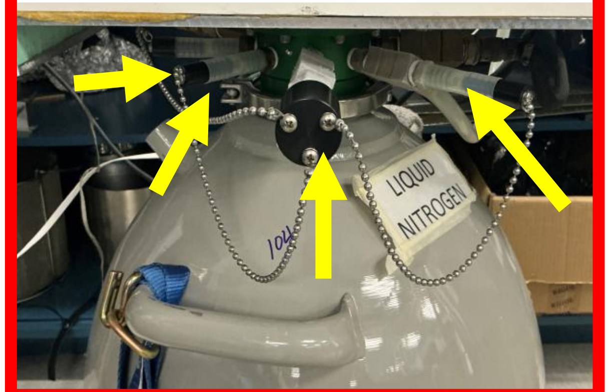


6. Monitor until "Dewar Full" > 1800



7. Stop the filling process (rotate LN2 tank knob clockwise)

8. Remove the transfer line and place LN2 Dewar plugs back.

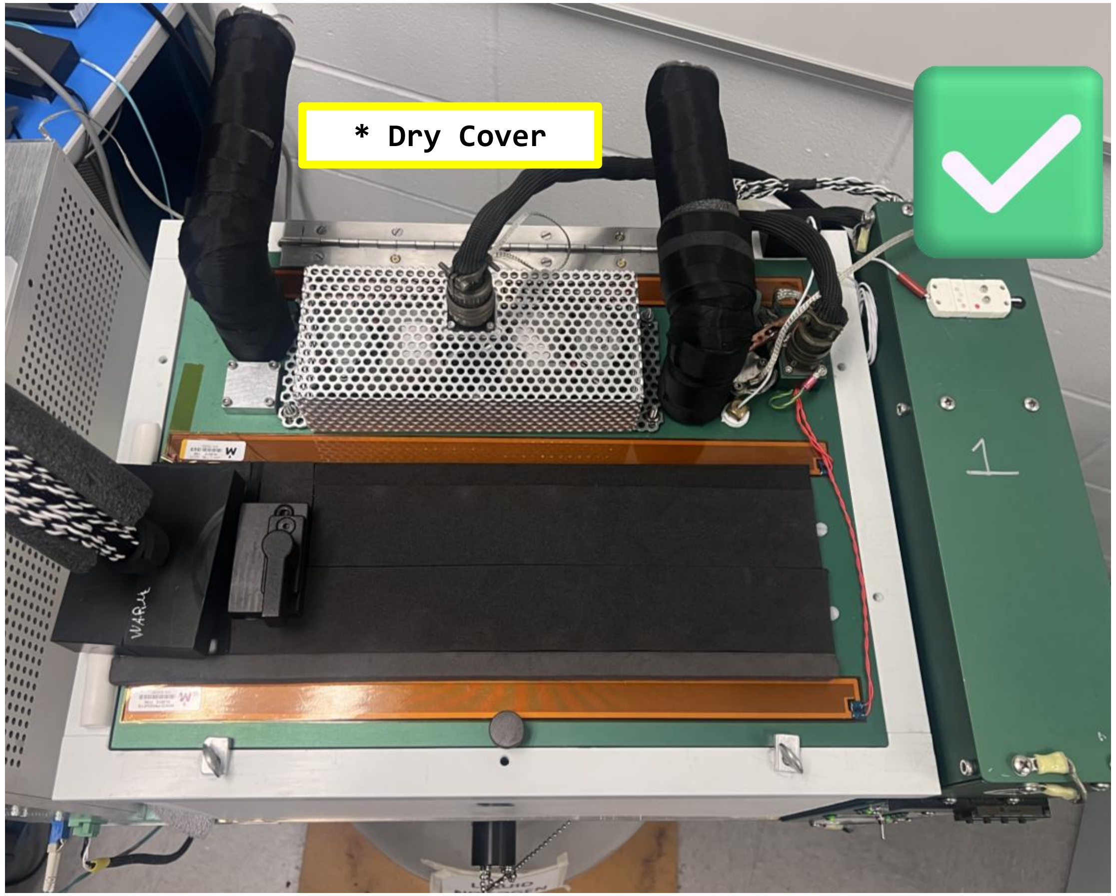


9. Remove potential ice blockage

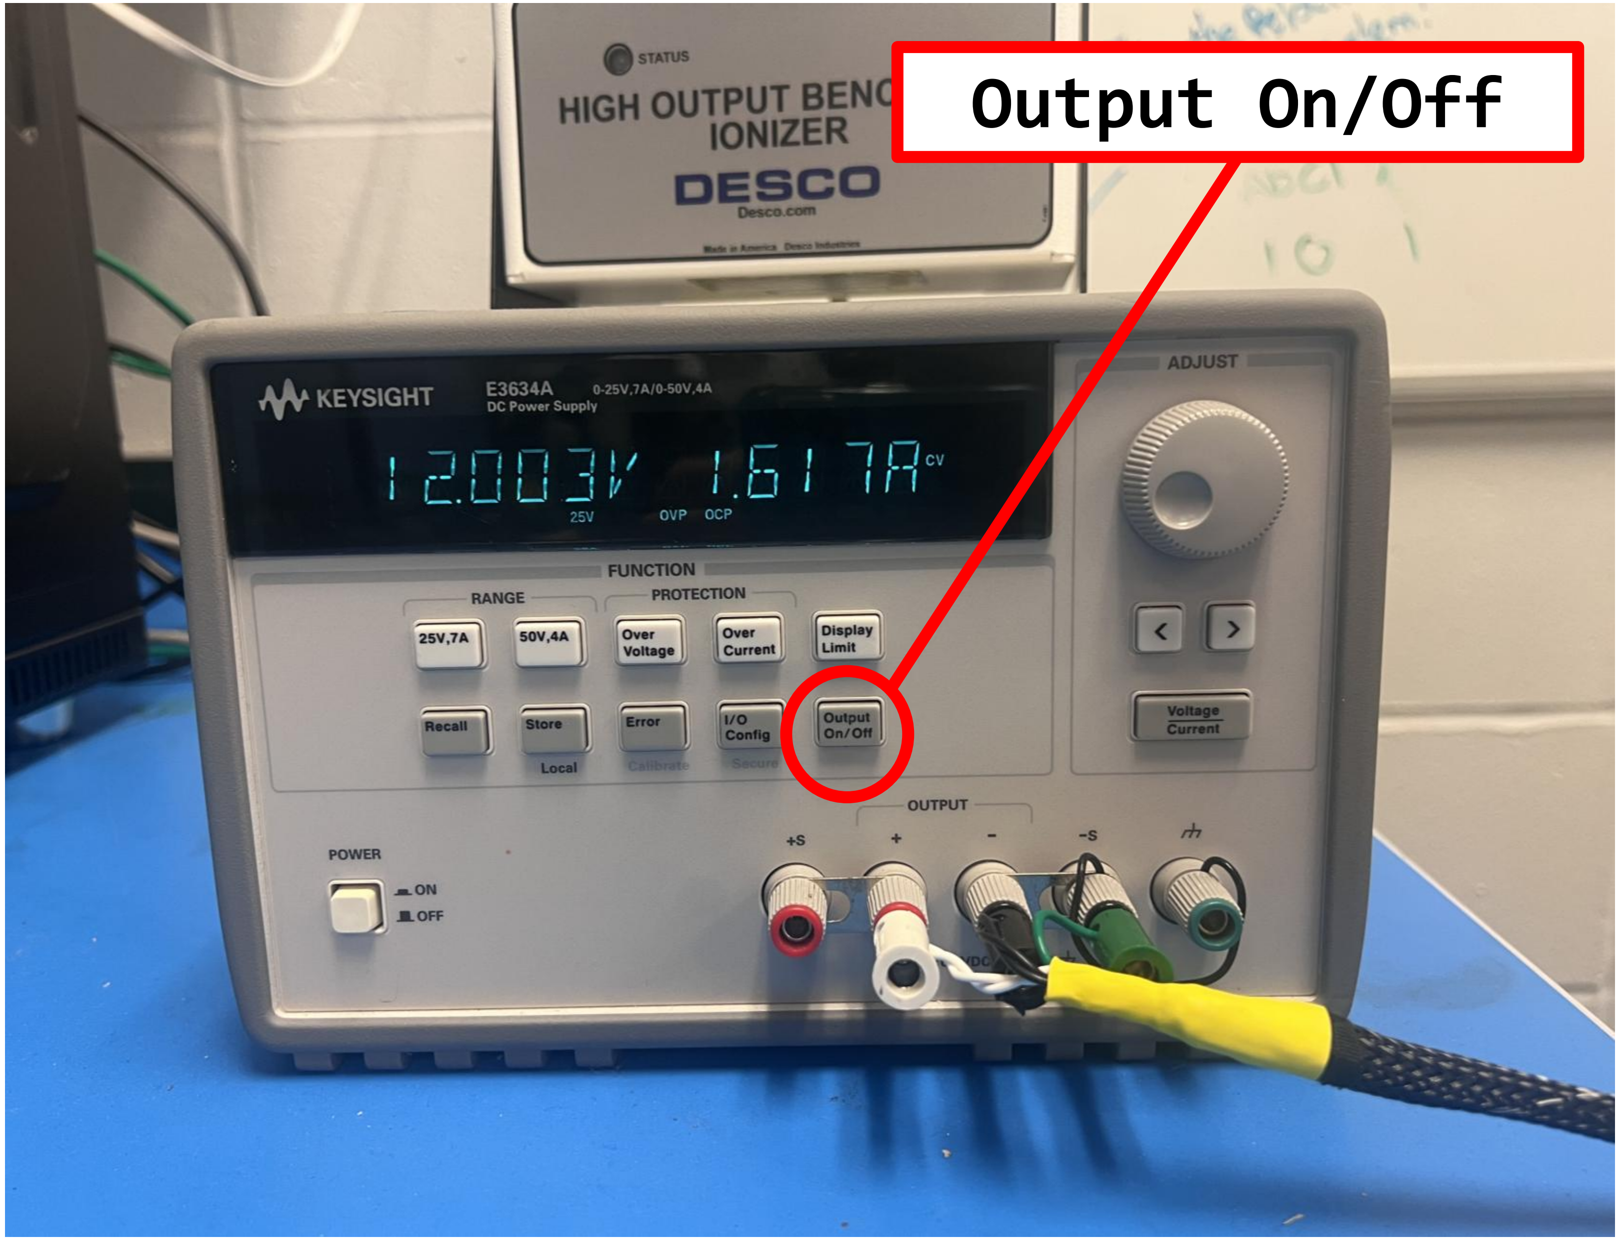
10. Set chamber in warm mode for 15 minutes and then turn CTS OFF.

Post-Warm Up Check

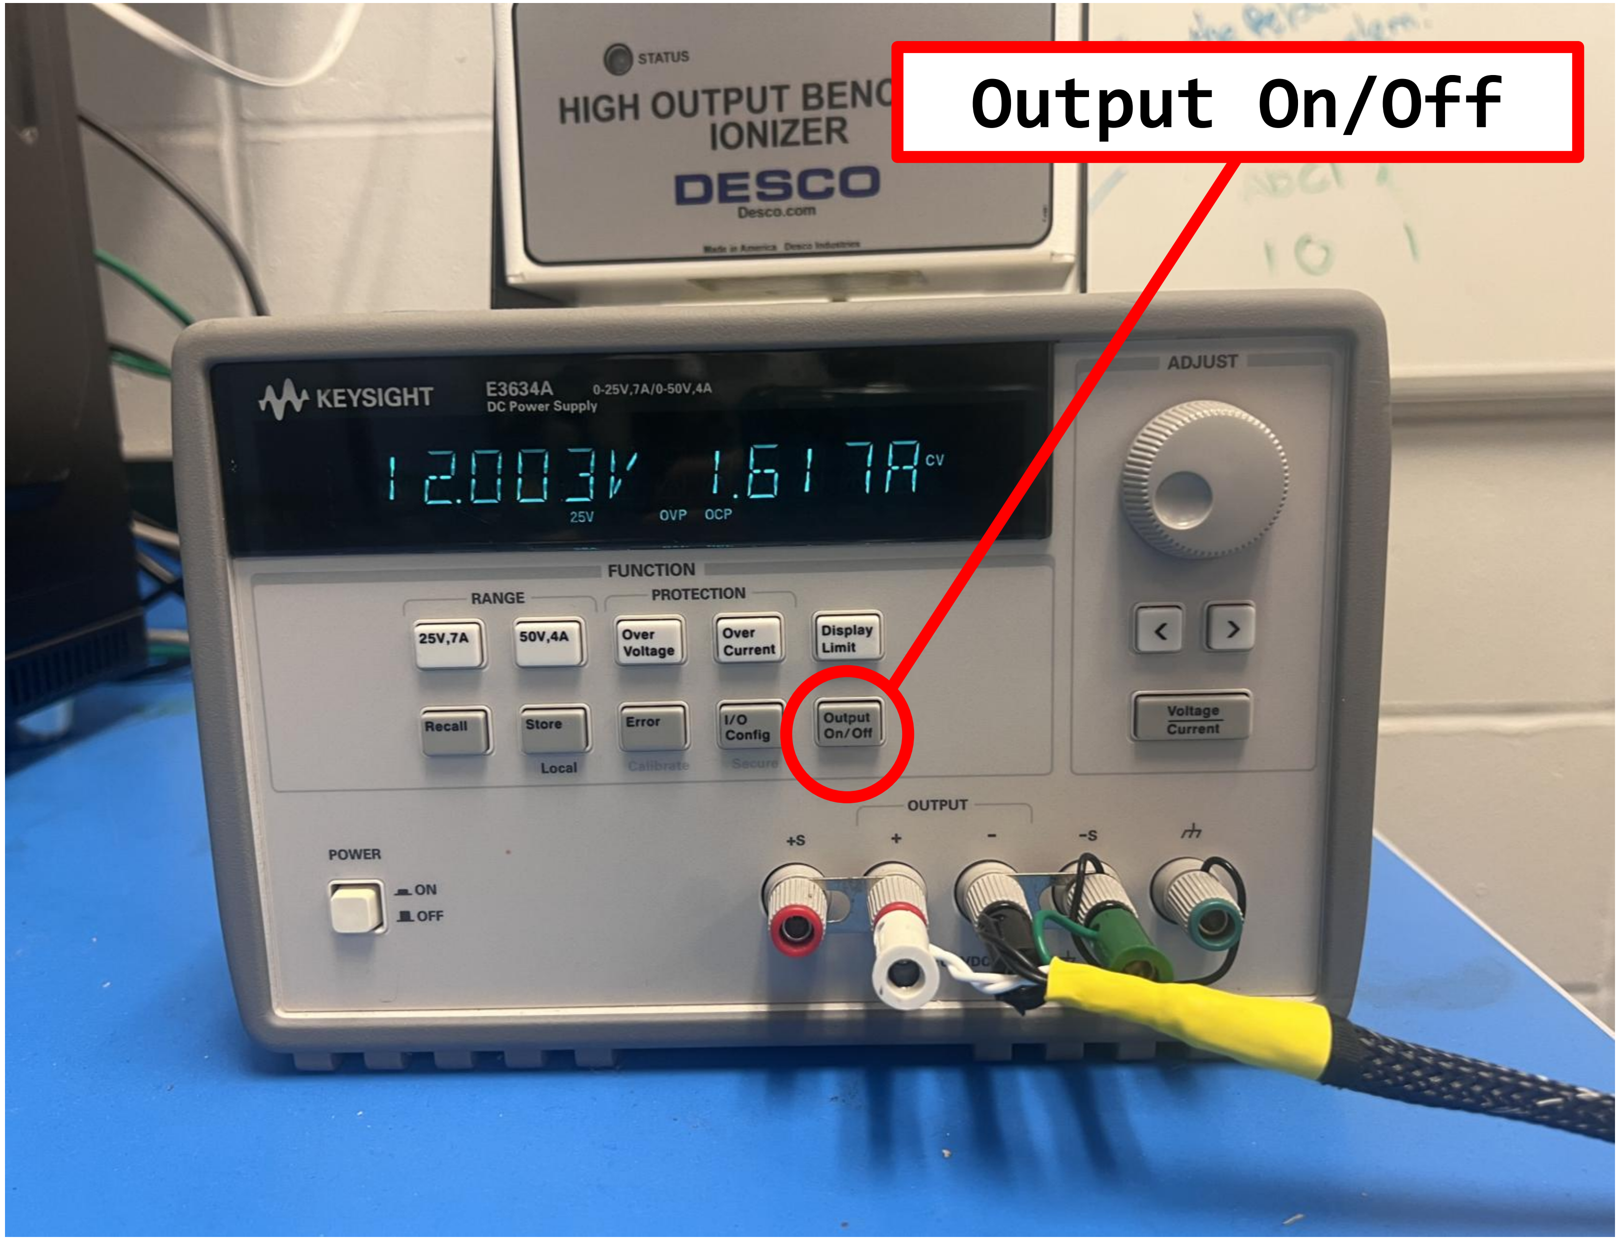
Make sure there is no water on the CTS cover. If there is, wipe it off.



Final Checkout: Turn On WIB

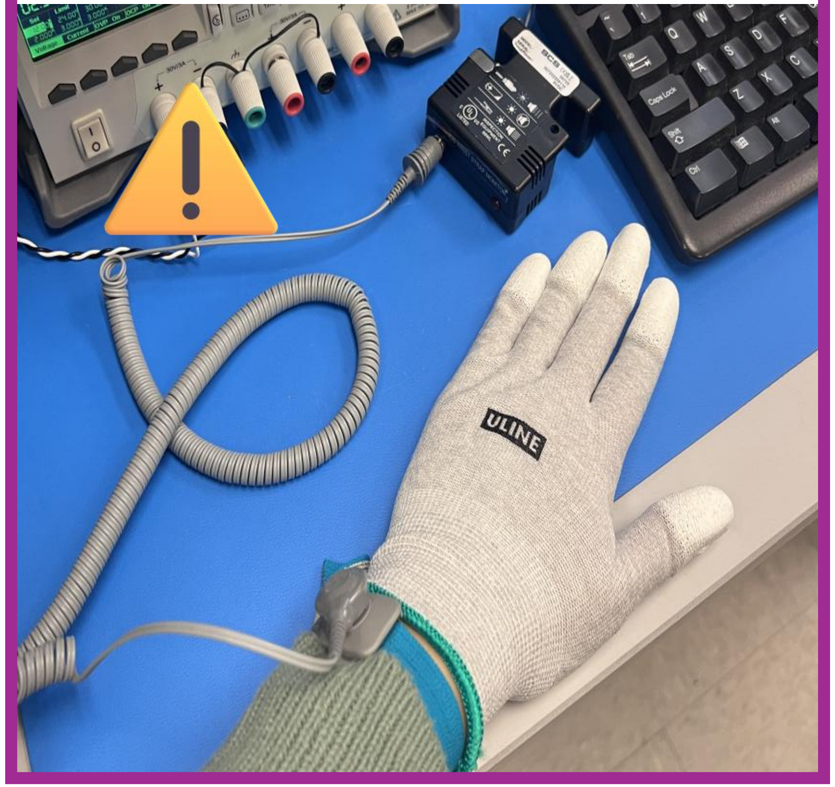


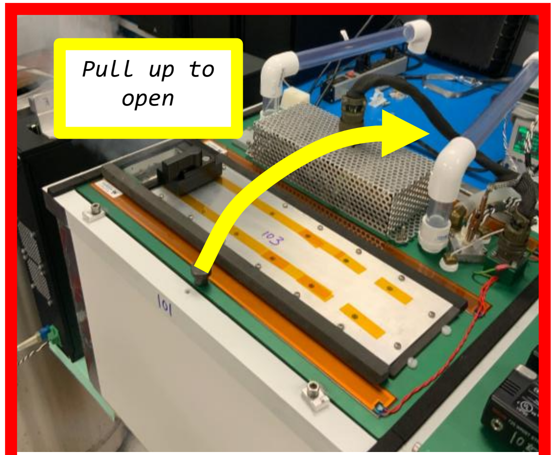
Final Checkout is done! Turn Off WIB



Take the FEMBs out of the CTS Chamber

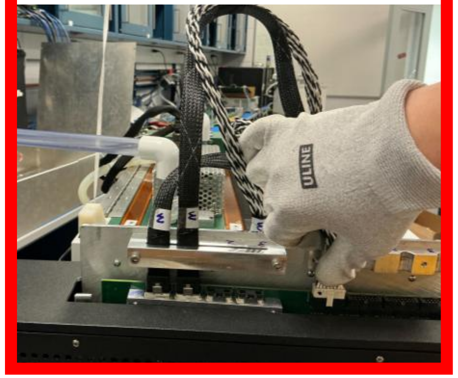
Remember to wear ESD-safe gloves and a wrist monitor!





1. Open the CTS cover

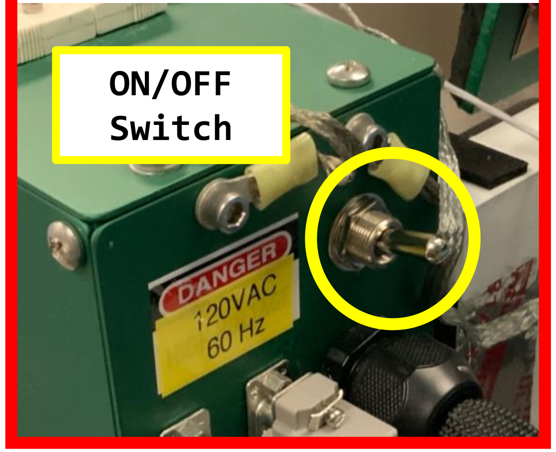
2. Disconnect the Data and Power cables from the WIB



3. Carefully, pick up the support structure with the FEMBs

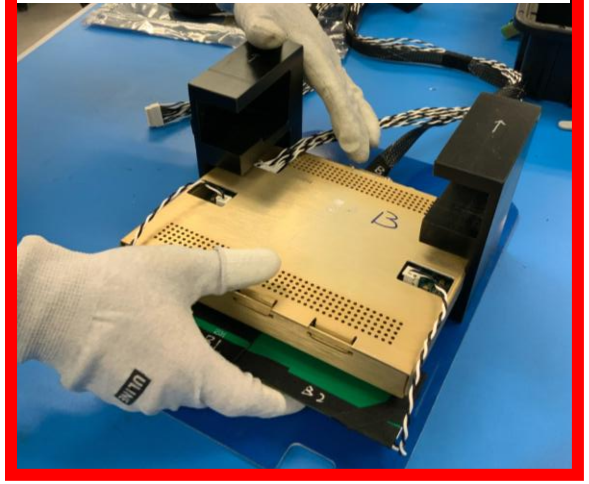
4. Place it on the desk

5. Turn CTS Off

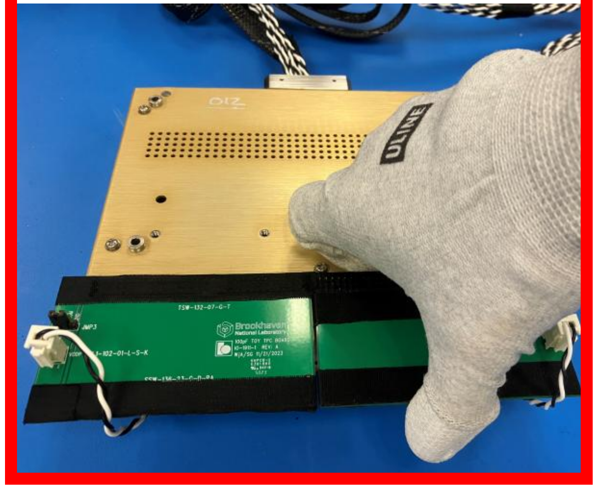


Disassembly: Top FEMB

1. Remove the Top CE Box

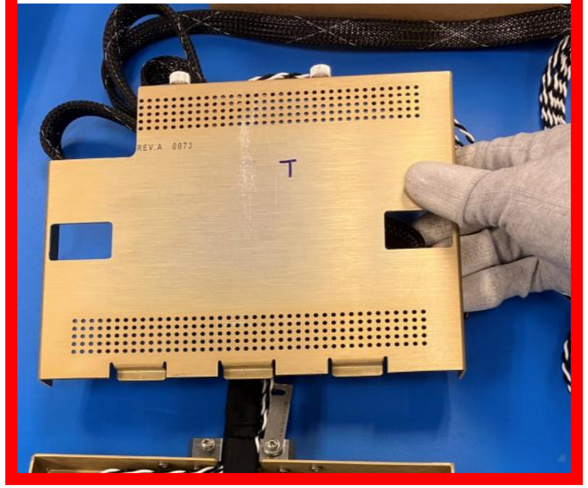


2. Remove Toy TPCs

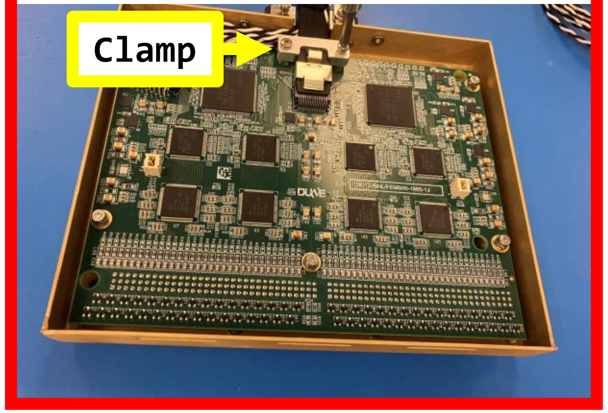


3. Disconnect the Power Cable

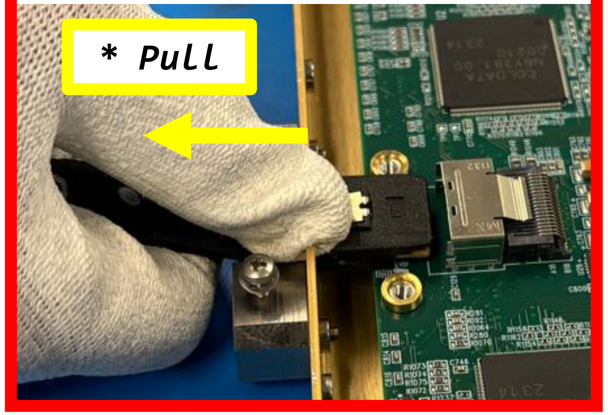
4. Remove the test cover



5. Remove the cable clamp



6. Disconnect the Data cable



7. Install the original CE box cover
